Carolyn,

Could you confirm that the 4/21 telecon summary does not contain proprietary information by COB 5/26? If I do not hear back from you by then, the telecon summary will be made publically available.

Thanks,
Nancy

Subject: April 21st telecon call summary

Hi Carolyn,

Please find attached a draft copy of the April 21, 2016 conference call summary regarding clarification questions on RAI responses. The purpose of sending you a copy is to request that NWMI review the summary to ensure that proprietary information has not inadvertently been included since this meeting summary will be made publically available. Also, please

review to confirm that the information NWMI discussed during the call is accurately captured and summarized. Please let me know by Wednesday (5/18) if you identify information within the summary that should be withheld or if there are statements that are inaccurate.

Please note that it is critical to receive the clarification information regarding the diesel generator building and external waste management building at MURR in order to move forward with the environmental review for Alternatives.

Thanks,
Nancy
