Re: Annual Registration of Generally Licensed Devices NRC Form 664
General License Registration Number GL-62625-20

Dear Dr. Rodriguez-Luccioni:

Our company is in receipt of NRC Form 664 regarding NRC Device Key 497158, which is a nuclear density meter we purchased in 1993. We are completing Section 4 of the form indicating Whereabouts Unknown for this device, and wanted to provide further explanation.

This device was used for an extended period of time, and then began to produce unreliable results, and was taken out of service. It is our belief that this device was removed from the dredge it was installed on and stored in our warehouse, pending a decision on whether to repair or dispose of it. That decision was deferred for a long period of time, while our Office Manager continued to complete and return the annual NRC form.

Last winter, our long-term Office Manager retired. This resulted in a new employee receiving the NRC Form 664 in the mail this spring. The employee brought it to my attention and asked for instructions. We have completed a search of our warehouse and grounds for the device, and did not find it. As a result, we are now completing Section 4.

Please contact me with any follow-up communications.

Sincerely,

Randy King, President
