**RE: Request to Terminate Radioactive Material Use
Dental Research Facility / 1210 Eisenhower Place / Ann Arbor, MI 48108
No Principal Activities for 24 Months in a Separate Building
University of Michigan
Materials License No. 21-00215-04 / Docket No. 030-01988**

Materials Licensing:

In accordance with 10 CFR 30.36(d)(4), the University of Michigan (U-M) is notifying the Nuclear Regulatory Commission (NRC) Region III that no principal activities have been conducted for a period of 24 months in the Dental Research Facility located at 1210 Eisenhower Place, Eisenhower Commerce Center Ann Arbor, Michigan 48108.

The U-M is hereby requesting termination of further radioactive material use at this off-campus facility and the removal of this specific location from Condition 10 of Materials License No. 21-00215-04. Please find enclosed the radiological decommissioning report dated July 15, 2016 for this facility.

Licensed radioactive material was last used in the Dental Research Facility on June 3, 2014 and the U-M Radiation Safety Service / OSEH staff conducted comprehensive laboratory residual radioactivity close-out surveys June 10-11, 2014 (Room 106) and May 24, 2016 (Rooms 110 and 116), and a MARSSIM-style final status survey of all impacted areas (Rooms 106, 110, and 116) to finalize decommissioning of the facility on May 24, 2016.

Thank you for your time and consideration with respect to this notification. Please do not hesitate to contact Senior Health Physicist Dennis Palmieri (dapalm@umich.edu) or me (drisc@umich.edu) at Radiation Safety Service / OSEH [(734) 764-6200] should you have any questions or comments regarding this correspondence.

Sincerely,

A handwritten signature in black ink that reads 'Mark L. Driscoll'.

Mark L. Driscoll
Director / Radiation Safety Officer
Radiation Safety Service / OSEH

Radiological Decommissioning Report

for the
U-M Dental Research Facility
1210 Eisenhower Place
Ann Arbor, MI
July 15, 2016

University of Michigan
NRC License No.: 21-00215-04

1.0 Description of Facility

1.1 Facility Address

University of Michigan Dental Research Facility
1210 Eisenhower Place
Eisenhower Commerce Center
Ann Arbor, MI 48108

1.2 Description

The Dental Research Facility (DRF) is a small suite of rooms leased by the University of Michigan for use by the Dental School as research laboratory space. Three faculty researchers have been approved to use very low-levels of radioactive materials in the facility since the facility was added as a location of use under the U-M Broad Scope Byproduct Materials License No. 21-00215-04 in 2010. Historical details are summarized separately in Section 2.

It is one of several independent brick and glass, single-story structures located in a commerce park owned by a private entity. It is situated approximately 42 degrees 14' 33" N and 83 degrees 43' and 52" W (see Attachments 1 and 2 -- road and aerial maps).

1.2 Locations of Use

Radioactive materials use was confined to three areas in the facility. Refer to the floor plans attached in the survey records (not to scale):

Rm 106—which served as a general laboratory, storage and waste storage area with a floor area of roughly 1300 square feet;

Rm 116—a large main open lab suite that includes sub-rooms where radioactive materials could be used: a tissue culture room, a cold room, and a dark room. The two researchers approved to use radioactive materials in this room occupied approximately half of the floor area (east end), sharing the other half (west end) with another researcher who did not make use of radioactive materials. The entire floor area is roughly a little larger than 3000 square feet. But, radioactive materials use was confined to specific and defined areas within the east half of the suite;

Rm 110—which served primarily as a storage room, freezer storage and waste storage area with a floor area roughly 350 square feet.

Room 106 and Room 116 are adjacent and connected by a door with Room 106 at the south west end of Room 116. Room 110 is separate and located a short distance down a hallway south of Room 116 and east of Room 106.

2.0 Historical Site Assessment

2.1 Initial Approval

The University leased the premises from a private leasing company for use as laboratory space by the Dental School in 2002. The Dental School leased the space to accommodate the research needs of two new faculty who came to the University to conduct collaborative research in biological materials science. (The faculty members are husband and wife).

At the request of the researchers, the University applied for an amendment to the University's NRC License No. 21-00215-04 to include the premises as a location of use in a letter dated January 17, 2003. The Nuclear Regulatory Commission added the facility as a location of use in Amendment No. 89 dated April 9, 2003. The first use of radioactive materials began in August of 2003.

2.2 Authorized Users and Usage History

2.2.1 Authorized Users: Since being included as a location of use on the U-M Byproduct Materials License, there have been only three researchers approved to use licensed material at the Dental Research Facility:

- Prof. Jan C. C. Hu
- Prof. James Simmer
- Prof. John Drach

Note: Profs. Hu and Simmer are husband and wife and collaborate professionally in their work. Much of their use was for the same course of research and for the same types of experiments, conducted by shared staff using the same facilities in Dental Research (Rms. 116 and 110). For the purposes of a historical site assessment they will be considered as one joint operation using licensed material

2.2.2 Usage History: Table 1.0 lists the radionuclides received since the facility was approved for use on the U-M Byproduct Materials License in 2003. The table shows: i) the highest activity received in any single purchase of the listed radionuclide, ii) the chemical form of the material used at the DRF, iii) the date of the last receipt of that type of radionuclide at the DRF, and iv) the authorized user making that particular purchase. A complete history of material receipts since 2003 for all users is included as Attachment 3.

Table 1.0

Radionuclide	Half-Life	Maximum Activity (nominal)* Received at DRF (mCi)	Chemical Form	Last Date Radionuclide Received at DRF	Authorized User
C-14	5730 y	~ 0.5	Various stocks	5/8/2008**	Drach
H-3	12.3 y	1	Thymidine nucleosides (AZT or variants)	3/11/2014	Drach
P-32	14.2 d	0.5	Nucleotide	11/3/2011	Simmer
P-33	25.3 d	1	Nucleotide	5/2/2012	Hu
S-35	87.5 d	1	Nucleotide	3/26/2004	Simmer

** Nominal or "catalog" quantity. Actual activity can be higher for shorter-lived material due to batch date production methods used by vendors for commonly ordered labeled compounds depending on date order is filled by vendor relative to vendor's last batch production date for the compound ordered.*

*** Stocks transferred from Dental School to Dental Research Facility when lab relocated in May of 2008. Maximum activity in a single vial = 0.25 mCi as an amino acid mixture in ethanol (2.5 milliliters).*

2.3 Timeline

October 2002 – initial application and conditional approval of Profs. Jan C. Hu and James Simmer to use radioactive materials in the Dental Research Facility at 1210 Eisenhower Place. Approvals conditioned upon amendment to U-M License No. 21-00215-04 to include 1210 Eisenhower Place as a location of use.

April 9, 2003 – NRC Amendment #89 to U-M license No. 21-00215-04 includes 1210 Eisenhower Place as a location of use

August 26, 2003 – first receipt of licensed radioactive material at the Dental Research Facility by Profs. Simmer and Hu. 0.5 mCi nominal of P-32 labeled nucleotide—GE Amersham, vendor.

May 8, 2008 – relocation of laboratory of Prof. John Drach from the Dental School to the DRF including transfer of H-3 and C-14 stocks (~ 1 mCi) along with ~ 25 g of uranyl acetate used in microscopy under general license.

December 3, 2008 – first purchase of licensed material by Prof. John Drach at the Dental Research Facility. 1 mCi nominal of H-3 thymidine—Moravsek Biochemical, vendor.

May 2, 2012 – last receipt of licensed material by Profs. Simmer and Hu. 1 mCi nominal of P-33 nucleotide—Perkin Elmer, vendor.

March 11, 2014—last receipt of licensed material by Prof. John Drach. 0.5 mCi of H-3 gancyclovir (thymidine nucleoside)—Moravsek Biochemical, vendor.

June 3, 2014—***last use of licensed material at the Dental Research Facility.*** This was by Prof. John Drach with the preparation and transfer of all tritiated specimens and compounds to a colleague at Des Moines University in Des Moines, IA for analyses. The transfer and shipment was through the University of Michigan Occupational Safety and Environmental Health—Radiation Safety Service (OSEH-RSS). Prof. Drach retired afterward and his approval was terminated. There have been no receipts or use of licensed material by Profs. Hu or Simmer since.

June 10-11, 2014—Comprehensive Laboratory Residual Radioactivity Close-Out survey of Dr. John Drach's laboratory (Rm 106). No remaining residual radioactivity. (See Sec. 3.0 – Surveys)

May 24, 2016—Comprehensive Laboratory Residual Radioactivity Close-Out of Hu / Simmer laboratory (Rms. 116 and 110) due to 2-year Timeliness-in-Decommissioning Rule. No remaining residual radioactivity. (See Sec. 3.0 – Surveys)

May 24, 2016 -- Final Status Survey of all impacted areas (Rms 106, 110 and 116) to finalize decommissioning of the Dental Research Facility in anticipation of removal of the facility as a location of use from the U-M Byproduct Materials License. No remaining residual radioactivity. (See Sec. 3.0 – Surveys)

2.2.4 Contamination Incidents

There is no history of any contamination incidents at the facility nor any uses or other procedures that could result in the release of radioactive contaminants into the environment or spread of contaminants in the facility.

2.2.5 Radioactive Wastes and Transfers

The long-standing practice at the University of Michigan is for OSEH – Hazardous Materials Management (OSEH-HMM) to collect all radioactive wastes including all potentially contaminated liquid wastes for proper disposal by OSEH-HMM in accordance with the provisions of 10 CFR 20 and the U-M Byproduct Materials License. Individual researchers are not permitted to discharge radioactive liquids into sinks or other drains. OSEH-HMM maintains copies of radioactive waste manifests identifying wastes by form, radionuclide and estimated activity of wastes collected.

Table 2.0
Waste Collections from DRF (2003 – Present)

Collection Date	Manifest No.	Auth. User	Radionuclide(s)	Comment
7/6/2004	26510	Simmer / Hu	P-32	DAW, liquids, LS fluid

4/17/14	Drach	H-3	1.0	Microbiotix, Inc; Worcester, MA	N/A Exempt Quantity per 10 CFR 30.18
6/3/14	Drach	H-3	2.1	DesMoines Univ; DesMoines, IA	IA-0071-77-RD2

2.2.6 OSEH-Radiation Safety Service Inspections

OSEH-RSS technical staff visit laboratories approximately four times each year and conduct swipe surveys for removable contamination in labs approximately semi-annually. Routine survey results from 2012 through 2014 did not identify any significant removable contamination in the Dental Research Facility.

2.2.7 Nuclear Regulatory Commission Inspections

Inspectors from the NRC have visited the Dental Research Facility from time-to-time. The two most recent inspections were in October of 2015 and February of 2012. The inspectors did not identify any items non-compliance, identify any contamination or express any concerns about the condition of the facility or potential for contamination or residual radioactivity.

3.0 Comprehensive Close-Out Surveys

3.1 Rm 106 Comprehensive Close-out Survey for Residual Radioactivity – John Drach Lab

Date: 6/10 – 6/11/2014

A comprehensive survey of all work surfaces along with floors, air and fume hood ventilation ducts, and any drains (sink and floor when present).

Radiation survey methods: consisted of 1) approximately 60 paper swipe tests of work surfaces ($> 100 \text{ cm}^2$), drains and vents for removable contamination, and 2) a calibrated meter survey using a Ludlum Model 44-142 plastic beta scintillator probe with Model 12 survey meter for fixed contamination. [Although the HSA records show lab used only tritium, a survey was still conducted using the survey meter to confirm there were no unexpected sources of radioactivity.] See Sec. 5.0 for instrumentation information.

Summary of Results: Only two paper swipes identified removable activity in slight excess of background counting levels. Extremely low-levels of removable H-3 contamination were noted in a fume hood (under 70 dpm net of background) and the inside of a radioactive materials storage freezer (under 210 dpm net of background). These areas were cleaned with soap and water and re-tested and shown to be at background after decontamination. The meter survey did not identify any statistically detectable radiation in excess of the minimum detectable activity and minimum detectable concentrations for the meter.

A copy of the survey results including descriptions and performance check information for the Ludlum survey meter is attached.

Conclusion: No significant residual radioactivity. The lab has not been occupied since Dr. Drach vacated and is used only for storage of records and some unused equipment left behind and being kept in storage by the Dental School.

3.2 Rooms 110 and 116 Comprehensive Close-out Survey for Residual Radioactivity

Date: 5/24/2016

A comprehensive survey of all work surfaces along with floors, air and fume hood ventilation ducts, and any drains (sink and floor when present).

Radiation survey methods: consisted of 1) approximately 150 paper swipe tests of work surfaces ($>100 \text{ cm}^2$), drains and vents for removable contamination, and 2) a calibrated meter survey using a Ludlum Model 44-142 plastic beta scintillator probe with Model 12 survey meter for fixed contamination. See Sec. 5.0 for instrumentation information.

Summary of Results: Paper swipes identified no removable activity in excess of background counting levels. The meter survey identified no statistically detectable radiation in excess of the minimum detectable activity and minimum detectable concentrations for the meter.

A copy of the survey results including descriptions and performance check information for the Ludlum survey meter is attached.

Conclusion: No significant residual radioactivity. The lab will remain occupied by Profs. Hu and Simmer for use as a research lab. They have terminated their authorization to use radioactive materials and do not intend to use licensed byproduct material in the future. The lab will retain 25 g of microscopy grade uranyl acetate (depleted uranium) manufactured and sold by Electron Microscopy Sciences of Hatfield, PA for use in electron microscopy of tissues used under general license (10 CFR 40.22). Because this use is under the provisions and restrictions of 10 CFR 40.22 it is independent of the U-M Broad Scope License or any other U-M specific license and is not considered residual radioactivity for the purposes of this decommissioning.

4.0 Final Status Survey for Rooms 106, 110 and 116

4.1 Designation of MARSSIM Class:

Based on the site operating history and previous radiological surveys, potentially impacted areas at the Dental Research Facility are not expected to contain any residual radioactivity or contain levels of residual radioactivity at only a very small fraction of the DCGL_w and the entire site should be considered a Class 3 site:

- 1) The only long-lived radionuclide (half-life in excess of 90 days) is H-3.
- 2) All short-lived radionuclides (P-32, P-33, S-35) and, based on receipt records, would have all decayed to levels indistinguishable from background.
- 3) The DCGL_w is $1.2\text{E}08 \text{ dpm}/100 \text{ cm}^2$
- 4) Historical record supports benign record of use: amounts received, physical/chemical form received (non-reactive, non-volatile), infrequent use, usage protocols (simple in vitro work), no history of any contamination incidents.
- 5) Comprehensive close out surveys demonstrate no residual radioactivity in excess of detection limits in any potentially impacted areas.

4.2 Survey Unit and Survey Design

A survey unit is a portion of a facility with common contaminants and contamination potential and contiguous surfaces or areas. For Class 3 sites, MARSSIM recommends no limit on surface area for a survey unit. For the purposes of the Final Status Survey for the Dental Research Facility, non-contiguous rooms are considered to be survey units. Where rooms are contiguous, they were incorporated into a single survey unit. Table 3.0 summarizes the survey units, class, areas and recommended MARSSIM sampling and scanning survey point selections. The approximate area includes ceiling and wall surfaces subject to survey.

Table 3.0

Survey Unit	Description	Impact Class	Approx. Area (sq. meter)	Sampling Selection	Scanning Locations
Rms 106 & 116	Labs w/ ancillary support subrooms: cold room, tissue culture, & darkroom	3	885	Random	Judgmental
Rm 110	Storage and Equipment	3	151	Random	Random

4.3 Number of Data Points per Survey Unit

MARSSIM permits using a relative shift of 1.67 for preliminary survey design based on Type I and Type II errors of 5%. The relative shift is the range of the Gray Area divided by the standard deviation of sample point concentrations. MARSSIM recommends a Gray Area upper bound equal to the DCGL_w and a lower bound (LBGR) equal to 50% of the DCGL_w. The recommended standard deviation for preliminary survey design is 30% of the DCGL_w. Thus $50\% / 30\% = 1.67$.

From MARSSIM Table 5.5:

Relative Shift = 1.67

Type I Error = Type II Error = 0.05

Minimum Number of required data points: 17

4.4 Survey Locations and Methods

Survey maps were prepared for each survey unit in exploded format showing walls, floors, and ceilings. MARSSIM permits judgmental surveys for Class 3 locations. However, those were performed in the comprehensive close out surveys for each of the rooms with comprehensive scan surveys of all work surfaces and sampling swipe tests taken at over 150 judgmentally selected locations.

Randomly selected locations were selected for the purposes of the Final Status Survey in order to enhance confidence in the results of the comprehensive close out surveys. Twenty (20) sample points were chosen for the survey unit consisting of Rms. 106 and 116. Eighteen sample points were selected in Rm. 110.

Paper swipe tests were collected from each random sample point. The area surveyed at each sample point was **100 cm²**. In addition, 1 - minute static meter survey counts covering **100 cm²** of surface were taken at each of the random sample points using a Ludlum Model 12 meter with a 44-142 plastic scintillator probe. See Sec. 5.0 for instrumentation information.

5.0 Instrumentation

5.1 Portable Instrumentation

Table 4.0 lists the portable survey instrumentation used to conduct comprehensive close out and final status surveys of the potentially impacted areas (Rms. 106, 110 and 116). All meters and probes are manufactured by Ludlum Instruments. Additional response information including scanning MDC and static MDA when used is included in the survey worksheets that are attached.

5.2 Analysis of Swipe Test Samples

Swipe tests were analyzed using a Packard (Perkin-Elmer) Tri-Carb 2900TR liquid scintillation analyzer S/N 422606. This is calibrated annually to H-3 and C-14 quenched standards. In addition, it undergoes weekly performance checks using the Packard system Internal Performance Assessment (IPA).

Table 4.0
Survey Instrumentation

Meter Model & S/N	Probe Model & S/N	Date of Use	Date of Calibration	C-14 Efficiency	Usage
2221 / 234992	44-142 / PR242791	6/10/2014	1/2014	5.7%	Comprehensive Close-out
12 / 248042	44-142 / PR266943	5/24/16	8/2015	6.6%	Comprehensive Close-out
12 / 265115	44-142 / PR246236	5/24/16	8/2015	7.1%	Final Status Survey

6.0 Conclusion

All measurements were substantially below the DCGL_w and the surveys did not identify any notable residual radioactivity of significance. No results approached the Lower Bound of the Gray Area (LBGR) which is 50% of the DCGL_w. Non-parametric statistical testing, therefore, is not necessary.

Based upon the complete historical site assessment, the comprehensive close-out surveys and the final status survey, we can conclude that the Dental Research Facility meets applicable criteria for full release to unrestricted use.

**Comprehensive Close-Out
Survey Record for Rm 106
Dental Research Facility
1210 Eisenhower Place
Ann Arbor, MI
June 10, 2014**

UNIVERSITY OF MICHIGAN
OCCUPATIONAL SAFETY & ENVIRONMENTAL HEALTH
RADIATION SAFETY SERVICE

LABORATORY CLOSE-OUT CHECKLIST

Authorized User	Room	Building	Date/Time	Conducted By:
Drach, John	106	Dental Research	10 Jun 2014/14:00	S. Weger

Reason for close-out: ☐ Inactive Status ☐ Termination ☐ Lab Relocation ☐ Other

IMPORTANT: ALL RADIOACTIVE MATERIAL AND WASTE MUST BE REMOVED **PRIOR** TO CLOSE-OUT SURVEYS:

	Survey Meter			
	Manufacturer Model / Serial Number	HV	Calibration Due Date	Instrument Efficiency
Survey Meter	Ludlum Model 2221 SN 234992	1150	1/15	C-14: 0.057 Si-32/P-32: _____
Probe	Ludlum Model 44-142 SN PR242791			
Performance checked?	C-14: Y N Si-32: Y N Other: _____ Y N			
Bkg 1 (cpm)	248			
Bkg 2 (cpm)	263			
Bkg 3 (cpm)	230			
Avg Bkg (cpm)	247			
Avg Bkg + MDCR	247 + 169 = 416	cpm		
Avg Bkg + L _D	247 + 77 = 324	cpm		

Scanning and Static Sensitivity: (see card attached to meter)

Scanning MDC:

MDCR = 169 cpm

MDC_{scan} = 16774 dpm/100 cm²

Static MDA:

L_D = 77 cpm

MDA_{static} = 5370 dpm/100 cm²

Location	Swipes Completed? (Y / N / NA)	Survey Meter 1 Reading	
		Scan	Static
Floor	Y	<MDCR	<MDA
Shelves / Drawers/ Cabinets	Y	<MDCR	<MDA
Refrigerators / Freezers	Y	<MDCR	<MDA
Sinks / Sink Traps/Benchtops	Y	<MDCR	<MDA
