October 11, 2016

United States Regulatory Commission
Attention: Document Control Desk,
Washington, DC 20555-0001

SUBJECT: NRC OFFICE OF INVESTIGATIONS REPORT NO. 1-2015-022 EA-16-138

To whom it may concern,

In response to the letter dated October 3, 2016 we would like to answer the four items requested in the letter. We just like to start by apologizing for the apparent violation and assure you that we did and are doing the best we can to avoid any future and further violations.

1. The reason for the apparent violation was an unintentional disconnect or apparent misunderstanding between a former employee of EMSI and the management of the company, were each party thought the other party attended to the problem. Unfortunately, someone has dropped the ball and the correction was not made, and we do apologize for that.
2. EMSI has since refrained from doing any jobs in DC that require the utilization of the Nuclear Gauge.
3. EMSI will apply to acquire a Federal License, and file for a reciprocity prior to conducting any work in areas under NRC jurisdiction.
4. EMSI will continue its course of not working in those areas until the License is issued and this investigation is concluded.

Sincerely,

A handwritten signature in black ink, appearing to read 'Ranya Seoud', written over a horizontal line.

Ranya Seoud, CEO
