The Nuclear Regulatory Commission needs to not only continue regulating but to expand its job as a regulator of "Fitness of Duty" at nuclear sites rather than formally cease to regulate and throw it to the nuclear utilities-industry, as appears to be its current plan. As is routinely the case, the NRC is also violating the clear writing rule, so it is impossible to be certain of what this proposal is about.

The Fitness for Duty rule should be zero tolerance and expanded to uranium mining and any other nuclear sites which you are supposed to supervising.

You must not only continue to regulate, oversee, and investigate drug and alcohol use at nuclear power stations and nuclear fuel sites, but should increase and improve oversight. It is important that there is a public record of these "events".

It would be a good idea to have a system where workers can only access the site after a breath test.

Furthermore, you need to have someone who has decent mastery of the English language write these documents, as required under the clear writing rule.
