

UNITED STATES
NUCLEAR REGULATORY COMMISSION
WASHINGTON, D.C. 20555-0001

December 06, 2016

LICENSEE: Nebraska Public Power District

FACILITY: Cooper Nuclear Station

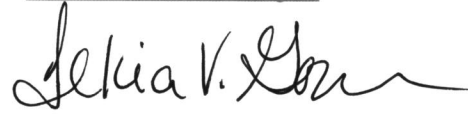

SUBJECT: SUMMARY OF SEPTEMBER 19, 2016, CLOSED MEETING TO DISCUSS DAM
FAILURE ANALYSIS DEVELOPED FOR THE INTEGRATED ASSESSMENT
FOR COOPER NUCLEAR STATION (CAC NO. MF4712)

On September 19, 2016, the U.S. Nuclear Regulatory Commission (NRC) staff held a closed meeting to discuss with Nebraska Public Power District (NPPD, the licensee) their request to receive design and operating information from the U.S. Army Corp of Engineers (USACE) regarding the Missouri River system dams (Agencywide Documents Access and Management System (ADAMS) under Accession No. ML16253A321). This information was being requested to assist NPPD in the development of the Cooper Nuclear Station (Cooper) integrated assessment report. During this meeting, NPPD presented a slide that provided a summary of Cooper's flood hazard reevaluation report findings related to external flood events due to upstream dam failure. Due to the security-related information within NPPD's presentation material, the slides are being withheld from public disclosure under Title 10 of the *Code Federal Regulations* Section 2.390.

The presentation and slide material allowed the NRC staff the opportunity to ask questions regarding the necessity of the information pertaining to the Missouri River dam system and provide feedback to the licensee on the path forward in completing their integrated assessment. Based on the licensee's presentation, the NRC staff requested that NPPD submit a formal request, on the docket, for access to and the use of dam system information developed by the USACE. The NRC staff, with the assistance of the USACE, will respond to this request, in writing and on the docket.
