Subject: [External_Sender] Pending Action Docket 71-9357 CAC No. L25122

Bernie,

Wanted to request a correction to the wording for the radioactive contents on the current certificate when this amendment goes through. While reviewing the current certificate I noticed an issue that had been overlooked in the earlier revisions. Its regarding the reference to "output activity" use under the Contents section. Technically the use of "output" activity under ANSI N432-1980 and the USDOT regulations only applies when you are transporting Ir-192. In this case the shipment of Co-60 should not include the output activity notation as Co-60 always ships as "content activity". The reference to Output curites in section 5(b)(2) and (3) should be removed as it is not applicable to Co-60 sources.

It's not a major issue since we ship to customer on content and they then ship the same way, but it is something that should be corrected either now or at the next revision.
