Dr. Dennis C. Bley
The chairman of ACRS
U.S. Nuclear Regulatory Commission
Washington, DC 20555-0001

December 19, 2016

Dear Dr. Bley,

As a person who is in charge of the APR1400 DCA and the CTO at KHNP, I wish to warmly invite the ACRS committee members to KHNP. As you may know, the Shin Kori Units 3&4 are the reference plants of the APR1400 DCD and they are in and preparing for commercial operation respectively. This would provide you the opportunity to see the safety attributes and design excellence of the APR1400.

KHNP is also building more units in Korea. Most of the heavy equipment for those units under construction is being made by Doosan Heavy Industry in Korea. I hope you can take a look at the manufacturing processes of the heavy equipment.

I suggest you also take a courtesy visit to the head office of KHNP for us to listen to your opinion on the review of the APR1400 DCD and the as-built design. We greatly value all comments that you may have on our APR1400 design.

I am looking forward to welcoming you to Korea at a time convenient to you.

Sincerely yours,

JongHo Lee, PhD

Chief Technology Officer

Korea Hydro & Nuclear Power Co., Ltd.

*We would be happy to help you with any trip planning and coordination.
