February 16, 1977

Director of Nuclear Reactor Regulation
Attn: Mr. Benard C. Rusche, Director
U. S. Nuclear Regulatory Commission
Washington, D. C. 20555

Re: Nine Mile Point Unit 2
Docket No. 50-410

Dear Mr. Rusche:

During a September 15, 1976 meeting at the Nine Mile Point Unit 2 construction site, members of your staff requested a report describing the geologic features in the Reheater Bay area, North Radwaste Trench, Circulating Water Intake Building, Normal Switchgear Building and North Notch of the Reactor Building. This report was requested to be provided on or about February 15, 1977.

An investigation of the features on site is underway. The correlation between the geologic features in the Reheater Bay and other site geologic investigations has necessitated a change of the report schedule. Our geologic consultants are presently finalizing the report. We will provide information and a preliminary assessment of the geologic features in these areas on February 25, 1977.

Very truly yours,

NIAGARA MOHAWK POWER CORPORATION

JAMES BARTLETT
Executive Vice President
