Subject: [External_Sender] Lost Creek Unplanned Release HH1-8 Valve Station
Date: Monday, February 06, 2017 6:14:34 PM

An unplanned release was discovered by a wellfield operator in the afternoon of February 6, 2017 at the Lost Creek ISR Project (PT788/SUA-1598) site resulting in the release of an estimated 3,200 gallons of injection fluid. The release was reported on the WDEQ-LQD spill report website spill ID 170206-1603.

The release was from a small hole in the poly-fusion joint on an injection circuit pipeline in the HH1-8 Valve Station. The fluid was contained within the valve station vault. Uranium concentration in the injection fluid was approximately 0.5 ppm (as U3O8). Further details will be provided in the pending written report.

If you have any questions, please contact me.
