

AREVA's Enhanced Accident Tolerant Fuel (EATF) Program

AREVA/NRC Meeting
Rockville
March 2017

Introduction

Jerry Holm

AREVA Licensing Engineer

Agenda

► Introduction

- ◆ Program Organization and Background
- ◆ Program Goals
- ◆ AREVA Approach

► Near Term Focus

- ◆ Chromia Doped Fuel
- ◆ Chromium Coated Cladding
- ◆ Licensing Approach

► Long Term Focus

- ◆ Silicon Carbide Cladding

► Summary

Objectives

- ▶ Introduce AREVA's EATF concepts to NRC
- ▶ Introduce program goals
- ▶ Present AREVA's current status and future activities
- ▶ Obtain NRC feedback

Introduction

Program Organization and Background

- ▶ Department of Energy funded program
- ▶ Multiple vendors involved
 - ◆ Each with individual design concepts
- ▶ Support from others
 - ◆ U.S. National Laboratories
 - ◆ European facilities
 - ◆ Operating plant licensees
- ▶ Congress authorized the program in 2012

Introduction

Program Goals

► Enhanced Accident Tolerant Fuel

- ◆ Can tolerate loss of active cooling in the reactor core for a considerable longer period of time than conventional fuel
- ◆ Maintains or improves fuel performance during normal operations, operational transients, design basis events and beyond design basis events

► Congressional mandate

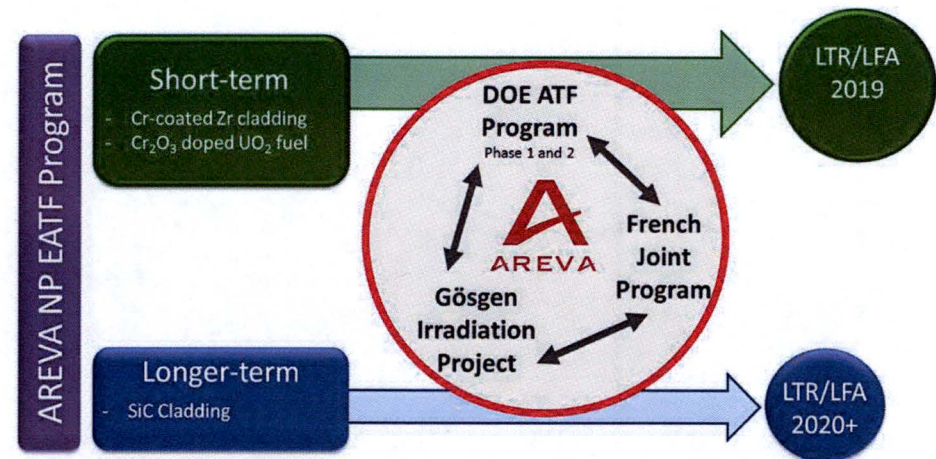

- ◆ Initiate aggressive research and development program for enhanced accident tolerant LWR fuels with the goal of inserting lead fuel rods (LFRs) or lead fuel assemblies (LFAs) into a commercial LWR by the end of FY 2022

► Industry goal

- ◆ Lead fuel rods insertion by 2019 and batch implementation by 2023

Introduction AREVA Role

- ▶ Design, test, and license EATF concepts
- ▶ Support insertion of lead test assemblies or lead test rods
- ▶ Provide reloads of EATF
- ▶ Near term concepts
 - ◆ Chromia doped fuel
 - ◆ Chromium coated cladding
- ▶ Long term concept
 - ◆ Silicon Carbide (SiC) Cladding

AREVA NP

AREVA's Enhanced Accident Tolerant Fuel (EATF) Program - March 8, 2017

EATF Concepts

Jacqueline Stevens
Engineering Supervisor

EATF Program Goal - DOE

Improved Clad Reaction Kinetics with Steam

- ☐ Heat of oxidation
- ☐ Oxidation rate
- ☐ Hydrogen bubble and explosion
- ☐ Hydrogen embrittlement of the clad

Improved Cladding Properties

- ☐ Clad fracture
- ☐ Geometric stability
- ☐ Thermal shock resistance
- ☐ Melting of the cladding

Improved Fuel Properties

- ☐ Lower operating temperatures
- ☐ Clad internal oxidation
- ☐ Fuel relocation/dispersion
- ☐ Fuel melting

Enhanced Retention of Fission Products

- ☐ Gaseous fission products
- ☐ Solid/liquid fission products

AREVA NP

AREVA's Enhanced Accident Tolerant Fuel (EATF) Program - March 8, 2017

NEAR TERM SOLUTION

**Chromia-doped pellets
Chromium-coated cladding**

AREVA NP

AREVA's Enhanced Accident Tolerant Fuel (EATF) Program - March 8, 2017

p.10

Near Term Solution AREVA Concept

AREVA NP

AREVA's Enhanced Accident Tolerant Fuel (EATF) Program - March 8, 2017

Near Term Solution Cr-Coated Cladding / Cr₂O₃-Doped Fuel

Improved Clad Reaction Kinetics with Steam

- ☆ Heat of oxidation
- ☆ Oxidation rate
- ☆ Hydrogen bubble and explosion
- ☆ Hydrogen embrittlement of the clad

Improved Cladding Properties

- ☆ Clad fracture
- ☆ Geometric stability
- ☆ Thermal shock resistance
- Melting of the cladding

Improved Fuel Properties

- Lower operating temperatures
- Clad internal oxidation
- ☆ Fuel relocation/dispersion
- Fuel melting

Enhanced Retention of Fission Products

- ☆ Gaseous fission products
- Solid/liquid fission products

CHROMIA-DOPED PELLETS

AREVA NP

AREVA's Enhanced Accident Tolerant Fuel (EATF) Program - March 8, 2017

Overview

Chromia (Cr_2O_3)-Doped Pellets

Cr_2O_3 -doping UO_2 improves:

- ▶ Fission gas retention
- ▶ Pellet-clad interaction resistance

AREVA Optimized Cr_2O_3 -Doped Fuel

- ◆ Optimum addition of [] Cr_2O_3
- ◆ []
- ◆ []
- ◆ High fuel viscoplasticity
- ◆ Enhanced wash-out behavior
- ◆ Reduced susceptibility to chipping

Benefits include:

- ▶ Improved reliability and robustness
- ▶ Reduced pin pressure
- ▶ Greater operating flexibility

AREVA NP

AREVA's Enhanced Accident Tolerant Fuel (EATF) Program - March 8, 2017

Initial Development Conclusions of Basic Studies

- ▶ Fuel pellets with large grain microstructure and viscoplastic behavior improve fuel performance

Cr_2O_3

- Achieves the targeted fuel microstructural evolutions
- No degradation of the fuel fundamental properties (e.g. thermal behavior, neutronic absorption)
- Compatible with current UO_2 manufacturing conditions
- No environmental consequences
- Reprocessing ability

Maximum improvement with [

]

**Optimizes pellet
microstructure &
performance**

AREVA NP

AREVA's Enhanced Accident Tolerant Fuel (EATF) Program - March 8, 2017

Fuel Behavior Operating Experience

- ▶ Irradiation in both PWR and BWR Reactors allows investigation into a wide range of operating conditions to high burnup:
 - ◆ From high duty operation to moderate or low power operation followed by ramp testing at various stages of burn-up and initial conditioning states

Enhanced product
performance based on
PWR and BWR program
results

Fuel Behavior, Operating Conditions Fission Gas Release_(1/3)

- ▶ Cr_2O_3 -doped UO_2 fuel exhibits reduced fission gas release in various operating modes:

**Greatest benefits are achieved under demanding
high power conditions**

AREVA NP

AREVA's Enhanced Accident Tolerant Fuel (EATF) Program - March 8, 2017

Fuel Behavior, Operating Conditions Fission Gas Release_(2/3)

- ▶ Reduced FGR during power transients

Post-Experiment Examinations Reveal:

- Extensive Accumulation of Gaseous Precipitation in the Cr_2O_3 -Doped Large Grains
- Low Accumulation of Gases on the Grain Boundaries

AREVA NP

AREVA's Enhanced Accident Tolerant Fuel (EATF) Program - March 8, 2017

Fuel Behavior, Operating Conditions Fission Gas Release_(3/3)

- Favorable change in the transient FGR kinetics with Cr_2O_3 -doped UO_2 fuel

Cr_2O_3 -doped UO_2 fuel is beneficial in reducing the source term

AREVA NP

AREVA's Enhanced Accident Tolerant Fuel (EATF) Program - March 8, 2017

Fuel Behavior, Operating Conditions Thermal Response

- ▶ Cr_2O_3 addition []
 - ◆ Negligible change in fuel melting point
 - ◆ No changes in specific heat
- ▶ Fuel temperature measurements show:
 - ◆ No significant difference between UO_2 and Cr_2O_3 -Doped fuels
 - ◆ Negligible on thermal conductivity degradation at high burnup

➤➤ Cr_2O_3 -doped UO_2 fuel thermal behavior
is similar to UO_2 fuel

Fuel Behavior, Operating Conditions

Pellet-Clad Interaction Resistance

- Ramp test results confirm significant gains in power ramp capability

◆ Investigations revealed the beneficial effects of Cr_2O_3 addition:

- Pellet yield under stress over a large volume reduces cladding hoop stress
- Multiple fine radial cracks at pellet periphery distribute load to minimize stress concentrations on the cladding

Clad stress is reduced in power transient conditions

AREVA NP

AREVA's Enhanced Accident Tolerant Fuel (EATF) Program - March 8, 2017

Fuel Behavior, Operating Conditions Pellet-Clad Interaction Resistance

AREVA NP

AREVA's Enhanced Accident Tolerant Fuel (EATF) Program - March 8, 2017

p.22

Fuel Behavior, Operating Conditions Washout Behavior

- ▶ Autoclave testing used to simulate ingress of coolant onto fuel pellets operating at representative LWR conditions

Enhanced wash-out behavior lowers activity release in defective rods

AREVA NP

AREVA's Enhanced Accident Tolerant Fuel (EATF) Program - March 8, 2017

Cr₂O₃-Doped Pellets Accident Conditions

- ▶ In the context of EATF, Cr₂O₃-doped fuel expected to show improved performance

Limit the consequences of an accident

- ◆ Reduce the rod internal pressure

- ◆ Reduce FGR during accidents

Limit the balloon size and the risk of burst

- ◆ Reduce the fine fragmentation of the fuel

Limit the risk of fuel dispersal

Improved performance over standard UO₂ pellets

Performance in Accident Conditions Testing Plan

- ▶ Analytical experiments to study and model the behavior of the doped fuel under accident conditions

AREVA NP

AREVA's Enhanced Accident Tolerant Fuel (EATF) Program - March 8, 2017

Cr_2O_3 -Doped Pellets Industrialization Status

- Fully industrialized in Europe
(completed in 2015)

AREVA Fuel Rod Mechanical Analysis

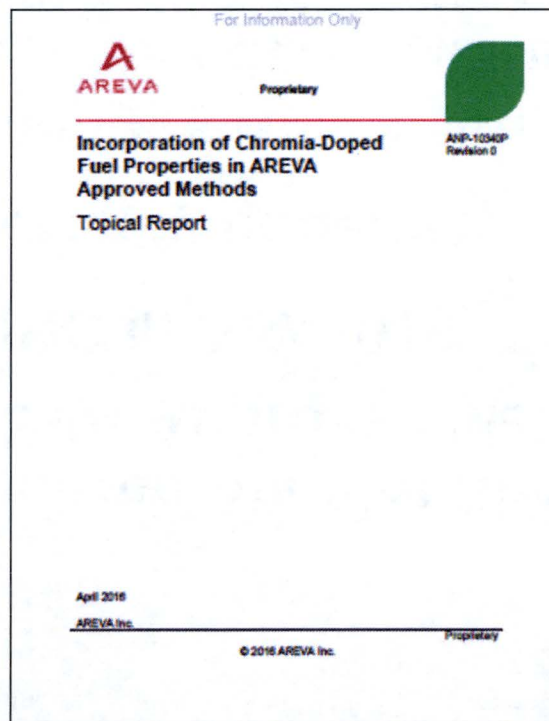

Cr₂O₃-Doped fuel performance will be included in both codes

► **BWR**

◆ **RODEX4**

► **PWR**

◆ **GALILEO**

AREVA NP

AREVA's Enhanced Accident Tolerant Fuel (EATF) Program - March 8, 2017

BWR Licensing

BAW-10340P, “Incorporation of Chromia-Doped Fuel Properties in AREVA Approved Methods”

- ▶ Submitted to NRC in Apr-2016
- ▶ NRC review currently underway
- ▶ Some model changes were needed
 - ◆ Fuel Rod Growth – low densification and earlier clad contact impact the empirical rod growth correlation (not part of RODEX4 code)
 - ◆ Thermal Conductivity – RODEX4 model change affects margin to fuel melt
 - ◆ Gaseous Swelling - RODEX4 model change affects margin to cladding strain limits

PWR Licensing

▶ BAW-10340P, Supplement 1 for PWR with GALILEO

- ◆ []

- ◆ GALILEO available as part of AREVA Advanced Methods AREA and ARITA

- ◆ Potential GALILEO Model changes: Thermal Conductivity, Gaseous Swelling, and FGR

▶ RLBLOCA and SBLOCA – plan is to incorporate GALILEO

- ◆ Initial step will be an evaluation for best approach

- ◆ RLBLOCA Rev.3 – Currently COPENIC for initialization

- ◆ SBLOCA – Currently RODEX2 for initialization

CHROMIUM COATED CLADDINGS

AREVA NP

AREVA's Enhanced Accident Tolerant Fuel (EATF) Program - March 8, 2017

p.30

Cr-Coated Cladding Definition

**PVD process compatible with
industrial scale fabrication**

AREVA NP

AREVA's Enhanced Accident Tolerant Fuel (EATF) Program - March 8, 2017

Cr-Coated Cladding Incremental Change

- ▶ Similar mechanical properties as Uncoated M5®
- ▶ No fuel assembly design changes required
- ▶ Tensile and radial creep tests at room temperature (RT) and 400°C show no change in mechanical behavior
- ▶ Improved wear resistance

>> Simplified licensing

AREVA NP

AREVA's Enhanced Accident Tolerant Fuel (EATF) Program - March 8, 2017

Cr-Coated Cladding Manufacturing

AREVA NP

AREVA's Enhanced Accident Tolerant Fuel (EATF) Program - March 8, 2017

p.33

Cr-Coated Cladding Performance in Normal Operation_(1/3)

» Negligible weight gain for Cr-coated samples
» No delamination observed on sample surface
» No dissolution of Cr in the water

} **Excellent corrosion
behavior in normal
conditions**

AREVA NP

AREVA's Enhanced Accident Tolerant Fuel (EATF) Program - March 8, 2017

Cr-Coated Cladding Performance in Normal Operation_(2/3)

**Cr-coating is protective
of underlying cladding**

AREVA NP

AREVA's Enhanced Accident Tolerant Fuel (EATF) Program - March 8, 2017

Cr-Coated Cladding Performance in Normal Operation_(3/3)

Improved cladding
fretting performance
and wear resistance

Cr-Coated Cladding Accident Performance^(1/2)

>> Improved high temperature steam oxidation behavior

AREVA NP

AREVA's Enhanced Accident Tolerant Fuel (EATF) Program - March 8, 2017

Cr-Coated Cladding Accident Performance^(2/2)

Improved clad swelling and rupture performance

AREVA NP

AREVA's Enhanced Accident Tolerant Fuel (EATF) Program - March 8, 2017

Cr-Coated Cladding USW Process

Cr-coating is compatible with current fuel rod manufacturing process

AREVA NP

AREVA's Enhanced Accident Tolerant Fuel (EATF) Program - March 8, 2017

Cr-Coated Cladding Ongoing Irradiations

► CEA reactor – Irradiated to []

- ◆ Cr-coated specimens showed excellent adherence to underlying substrate
- ◆ No Cr diffusion into the substrate and no modification of Cr-Zr interface observed

**Cr-Coating performs as-expected under irradiation:
No diffusion or delamination**

Cr-Coated Cladding IMAGO - Overview

► Objectives:

- ◆ Acquire in-reactor material data under representative PWR conditions:
 - Corrosion kinetics
 - Evolution of microstructure, mechanical, or physical properties under irradiation
- ◆ Obtain in-reactor data for the justification of future fuel rod/assembly irradiations

► Description:

- ◆ EATF samples within Material Test Rods (MTRs) inserted within guide tubes of a fuel assembly:
 - Cr-coated zirconium alloys
 - SiC composite samples

First irradiation cycle began [
]

AREVA NP

AREVA's Enhanced Accident Tolerant Fuel (EATF) Program - March 8, 2017

Cr-Coated Cladding IMAGO – Material Description

AREVA NP

AREVA's Enhanced Accident Tolerant Fuel (EATF) Program - March 8, 2017

p.42

Cr-Coated Cladding IMAGO – PIE

Large scope of PIEs through on-site inspections and hot cell examinations at PSI and CEA

AREVA NP

AREVA's Enhanced Accident Tolerant Fuel (EATF) Program - March 8, 2017

PERFORMANCE ASSESSMENT

AREVA NP

AREVA's Enhanced Accident Tolerant Fuel (EATF) Program - March 8, 2017

p.44

Cr-Coated Cladding Codes and Methods

- ▶ Thin coating does not change base material performance
 - ◆ No modification needed to M5[®] mechanical or physical properties.
- ▶ Expected modeling changes due to coating

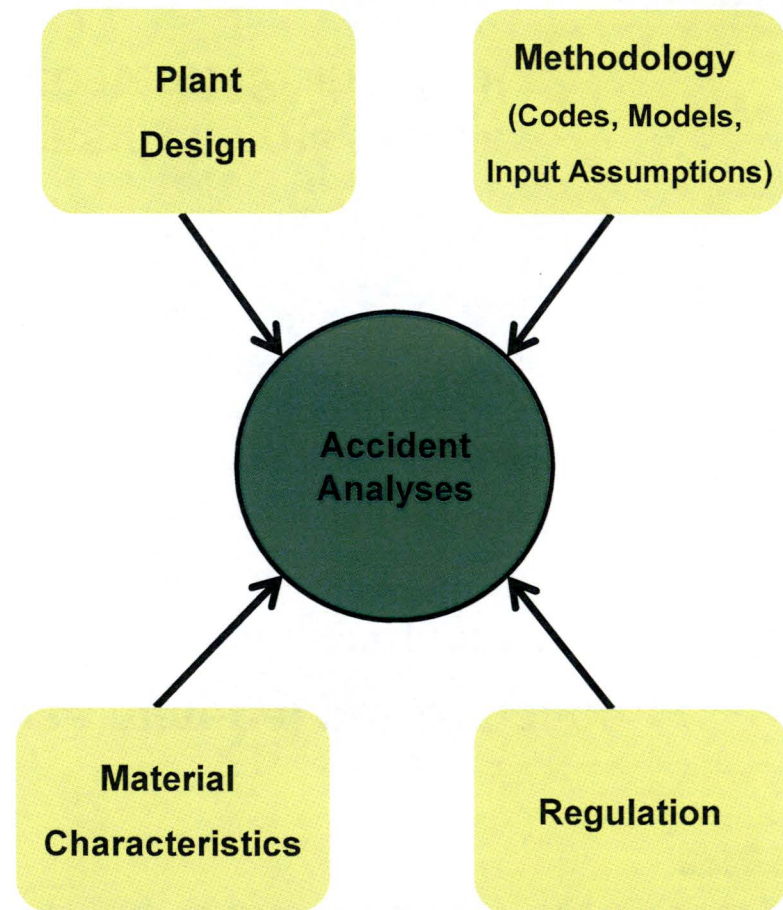

➤ Irradiation & hot cell measurements will be performed to verify Cr-coated M5[®] material properties

Accident Analyses for EATF Concept

- ▶ Experiments demonstrate significant improvements in material characteristics which are relevant to safety

- ◆ Pre-transient conditions of the fuel and cladding
- ◆ Transient performance

- ▶ Accident analyses demonstrate the overall plant safety

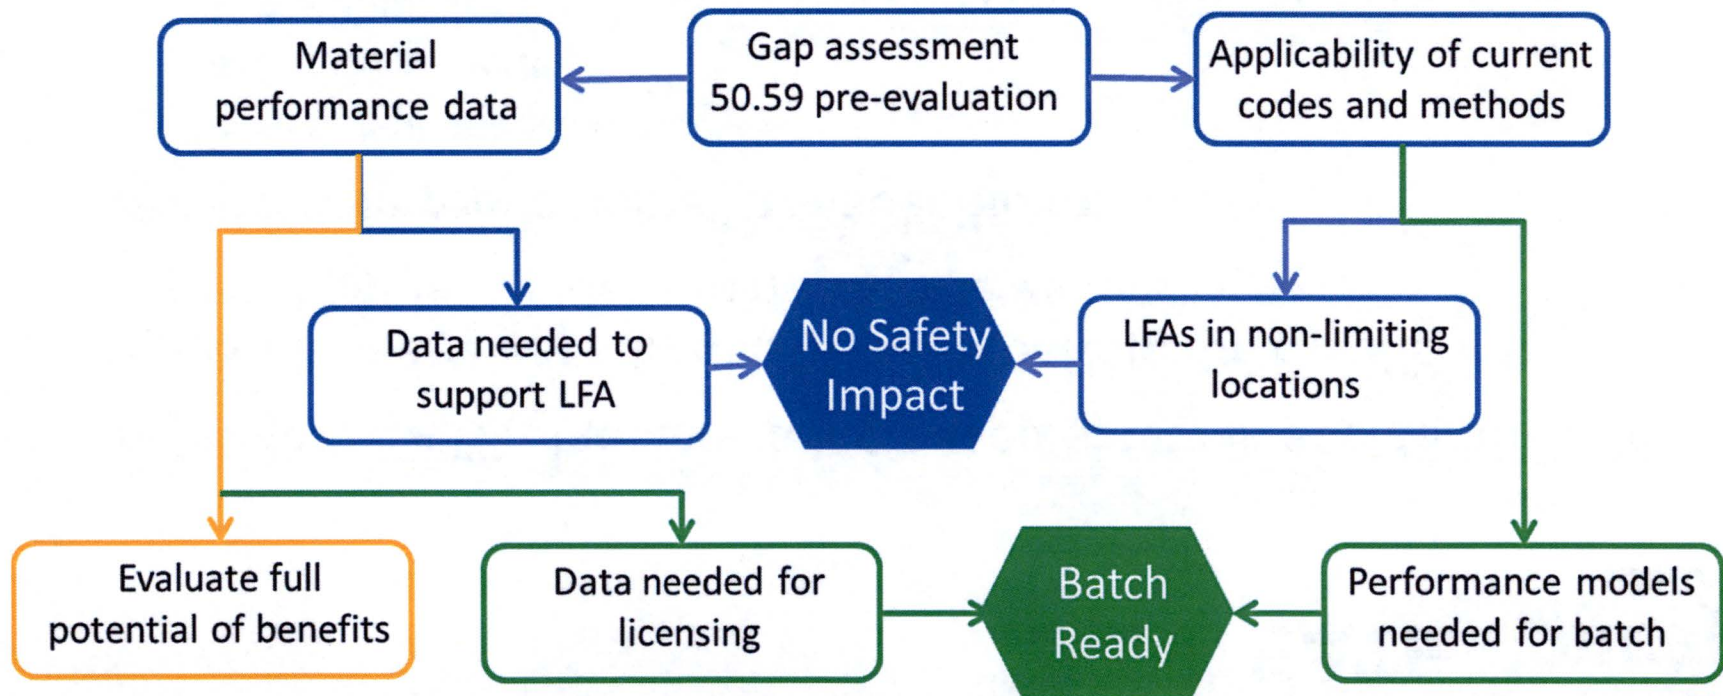

Accident Analyses for EATF Concept

- ▶ **Primary EATF objective is increased safety in accidents**
- ▶ **Accident analyses translate the experimental results into quantifiable accident performance values**
- ▶ **“Safety improvements” are specific to:**
 - ◆ Accident and scenario
 - ◆ Figure of merit
 - ◆ Plant design
- ▶ **First analyses and assessments provide assurance of no detrimental to current fuel design**
 - ◆ Limited code modification needed
- ▶ **Later analyses quantify the safety improvements gained by the EATF concept**

Long Term Solution

Silicon Carbide Cladding

Jacqueline Stevens
Engineering Supervisor

Why Silicon Carbide?

Benefits over Zirconium based cladding

AREVA NP

AREVA's Enhanced Accident Tolerant Fuel (EATF) Program - March 8, 2017

Long Term Solution SiC Cladding / Cr₂O₃-Doped Fuel

Improved Clad Reaction Kinetics with Steam

- ☆ Heat of oxidation
- ☆ Oxidation rate
- ☆ Hydrogen bubble and explosion
- ☆ Hydrogen embrittlement of the clad

Improved Cladding Properties

- ☆ Clad fracture
- ☆ Geometric stability
- ☆ Thermal shock resistance
- ☆ Melting of the cladding

Improved Fuel Properties

- Lower operating temperatures
- ☆ Clad internal oxidation
- ☆ Fuel relocation/dispersion
- Fuel melting

Enhanced Retention of Fission Products

- ☆ Gaseous fission products
- ☆ Solid/liquid fission products

AREVA NP

AREVA's Enhanced Accident Tolerant Fuel (EATF) Program - March 8, 2017

Silicon Carbide Development History

- ▶ Multilayer SiC concept originally developed for Gen IV reactors (CEA program initiated in 2000, experimental work in 2002)
- ▶ Transitioned to LWR Gen III EATF cladding concept under AREVA-CEA-EDF Tri-Partite agreement
- ▶ Significant technical challenges associated with realizing the projected benefits of SiC
- ▶ AREVA's focus is to develop a robust SiC concept by systematically addressing the technological gaps

Silicon Carbide Cladding Mechanical Properties^(1/2)

► Mechanical properties

- ◆ Different braided preforms have been tested
- ◆ Filament winding – minimal roughness of the inner surface

► 3D braiding – Interlock

- ◆ Thermal conductivity
- ◆ Resistance to interlaminar shear

Mechanical properties can be tailored by appropriate braiding

AREVA NP

AREVA's Enhanced Accident Tolerant Fuel (EATF) Program - March 8, 2017

Silicon Carbide Cladding Mechanical Properties^(2/2)

► Surface treatment

- ◆ Significant reduction in sample roughness
- ◆ No effect on mechanical properties

► After long-term exposure under representative LWR Conditions

- ◆ No degradation in mechanical properties

Excellent retention of the mechanical behavior

[]

exposure to LWR coolant

AREVA NP

AREVA's Enhanced Accident Tolerant Fuel (EATF) Program - March 8, 2017

Silicon Carbide Cladding Accident Performance

- 
- 
- ▶ Following exposure to [], slight weight gain
 - ▶ Strength maintained at high temperatures, high T_M
 - ▶ Reduced cladding deformation
 - ▶ Reduced hydrogen and heat generation

AREVA NP

studies

Silicon Carbide Development Plan

AREVA NP

AREVA's Enhanced Accident Tolerant Fuel (EATF) Program - March 8, 2017

AREVA EATF Program Summary

▶ Near-term solution – Cr-coated M5[®] with Cr₂O₃-doped pellets

- ◆ Improved performance in normal operation
- ◆ Improved performance in accident conditions
- ◆ Simplified licensing

▶ Revolutionary solution – SiC cladding

- ◆ Significant gains in severe accident scenarios
- ◆ Higher risk, technical challenges remain
- ◆ Require significant changes in regulatory framework
