EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)

0 2 During normal surveillance testing of MSIV closure time, MSIV 2-203-1A closed in

0 3 5.6 seconds and MSIV 2-203-1C closed in 2.8 seconds after the initiation signal, which

0 4 did not meet T.S. Table 3.7.D.2 limits of $3 \leq T \leq 5$ sec. Event was of minimal

0 5 safety significance because other MSIV closure times were within T.S. limits and

0 6 valves did close. This event has occurred several times before at Dresden, most

0 7 recently referenced under R.O. #50-249/78-54.

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27)

MSIV 2-203-1A and 2-203-1C valve timing was out of adjustment. After minor adjustment to speed control valves, MSIV 2-203-1A closed properly in 4.2 sec. Review of historical closing times for MSIV's indicates that minimal time variations occur infrequently because of wear and heat of drywell environment. Valves will be inspected during next refueling outage per DMP 233.
