4	Override	C: OATC, SRO (TS)	1A HPI Pump Trips & 1B HPI Pump Fails to Auto Start
5	MPI040 MPI070	I: OATC, SRO	Loop 1A RC Flow Fails Low
6	MPS031 MPS031D	R: OATC, SRO (TS)	80 gpm RCS Leak / Manual Power Reduction
7	MPS031D MPS150 Override	M: ALL	Small Break LOCA <ul style="list-style-type: none"> • 1C HPI Pump Fails to Start on ES • 1HP-24 Fails Closed
* (N)ormal, (R)eactivity, (I)nstrument, (C)omponent, (M)ajor			

SCENARIO 1 EVENT SUMMARY

- Event 1:** When the crew takes the shift, the SRO will direct the BOP to perform PT/0/A/0610/017 Enclosure 13.11 (Functional Verification Of SL Breaker(s)). The SRO will enter TS 3.8.1 Condition D by procedure and then the BOP will perform a functional check of SL1 and SL2 breakers.
- Event 2:** The operating Component Cooling Pump (1A CC Pump) will trip and the Standby CC Pump (1B CC Pump) will fail to auto start. The BOP will reference an Alarm Response Guide which will direct manually starting the Standby CC Pump. Since there will be no CC flow until the Standby CC Pump is started, Letdown temperature will begin to increase and 1HP-5 will automatically close on high Letdown temperature (135°F). The SRO will then enter AP/1/A/1700/032 (Loss of Letdown) to restore Letdown.
- Event 3:** 1NI-5 will lose DC power which will result in 1NI-5 reading 0% power. The BOP will reference an Alarm Response Guide which will direct the crew to bypass the 1A RPS channel in accordance with OP/1/A/1105/014 (Control Room Instrumentation Operation and Information).
- Event 4:** The operating High Pressure Injection Pump (1A HPI Pump) will trip and the Standby HPI Pump (1B HPI Pump) will fail to auto start. The SRO will enter AP/1/A/1700/014 (Loss of Normal HPI Makeup and/or RCP Seal Injection) to start the Standby (1B) HPI Pump and re-establish normal HPI Makeup and RCP Seal Injection. The SRO will enter TS 3.5.2 Condition A for the inoperable HPI Pump.
- Event 5:** 1A Loop RCS Flow instrument will fail low which will cause ICS to re-ratio Feedwater in an attempt to restore the primary to secondary heat balance. Once alarms are received, the crew will perform Plant Transient Response to stabilize the plant. The OATC will re-ratio Feedwater to restore the heat balance. Once the plant is stable, the SRO will enter AP/1/A/1700/028 (ICS Instrument Failures) and ensure the appropriate ICS stations are in manual and BOP will perform an instrument surveillance for the failed instrumentation.
- Event 6:** The RCS will develop an unidentified leak of approximately 80 gpm. Once alarms are received, the SRO will enter AP/1/A/1700/002 (Excessive RCS Leakage). Since the RCS leak will be greater than Letdown Storage Tank makeup capability from 1A Bleed Holdup Tank, the crew will initiate AP/1/A/1700/029 (Rapid Unit Shutdown) and manually shutdown the unit. The SRO will enter TS 3.4.13 Conditions A & B.
- Event 7:** Once Reactor power has been decreased > 10% and auxiliary power has been transferred to the Startup Transformer in Event 6, the RCS leak will propagate into a Small Break LOCA. The 1C HPI Pump will fail to automatically start and 1HP-24 will fail closed when ES actuates. The SRO will Transfer to the LOSCM tab of the EOP. One RO will perform Rule 2 (Loss of SCM) and the other RO will perform EOP Enclosure 5.1 (ES Actuation).

... END ...

Rule 6
HPI**HPI Pump Throttling**
Limits

- HPI must be throttled to prevent violating the RV-P/T limit.
- HPI pump operation must be limited to two HPIPs when only one BWST suction valve (1HP-24 or 1HP-25) is open.
- HPI must be throttled ≤ 475 gpm/pump (including seal injection for A header) when only one HPI pump is operating in a header.
- Total HPI flow must be throttled ≤ 950 gpm including seal injection when 1A and 1B HPI pumps are operating with 1HP-409 open.
- Total HPI flow must be throttled < 750 gpm when all the following exist:
 - LPI suction is from the RBES
 - piggyback is aligned
 - either of the following exist:
 - only one piggyback valve is open (1LP-15 or 1LP-16)
 - only one LPI pump operating
- HPI may be throttled under the following conditions:

HPI Forced Cooling in Progress:	HPI Forced Cooling NOT in Progress:
<u>All</u> the following conditions must exist: <ul style="list-style-type: none">• <u>Core</u> SCM > 0• CETCs decreasing	<u>All</u> the following conditions must exist: <ul style="list-style-type: none">• <u>All</u> WR NIs $\leq 1\%$• <u>Core</u> SCM > 0• Pzr level increasing• SRO concurrence required if throttling following emergency boration

HPI Pump Minimum Flow Limit

- Maintain ≥ 170 gpm indicated/pump. This is an instrument error adjusted value that ensures a real value of ≥ 65 gpm/pump is maintained. HPI pump flow less than minimum is allowed for up to 4 hours.

Enclosure 5.16
SG Tube-to-Shell ΔT Control

NOTE

- SG tube-to-shell ΔT is calculated by the OAC with points displayed on Loop P/T displays as indicated below:

1A SG ΔT	1B SG ΔT
Bottom of Loop 'A' P/T display	Bottom of Loop 'B' P/T display
S/G TUBE/SHELL DT	S/G TUBE/SHELL DT

- SG tube-to-shell ΔT limits:

Stress	OAC Indication
Tensile Stress Limit (Tubes colder than shell)	+130°F
Compressive Stress (Tubes hotter than shell)	-70°F

- IAAT** any SG tube-to-shell ΔT approaches either limit, **THEN** take appropriate action per the following:

Limit Approached	Action
Tensile	GO TO Step 2
Compressive	GO TO Step 50

Examiner Note: *SG tube-to-shell ΔT should not approach either limit for this scenario.*

CRITICAL TASKS

- CT-1** Secure all RCPs within two minutes of $SCM \leq 0^{\circ}F$ per Rule 2 (BWOOG CT-1)
- CT-2** Start Outside Air Booster Fans within 30 minutes of initiation of LOCA (BWOOG CT-27)
- CT-3** Start 1C HPI Pump within 10 minutes of LOCA to provide flow in both headers to preclude quarter core cooling

- Reactor Power = 97%

Turnover:

- SASS is in Manual for calibration
- AMSAC/DSS is bypassed for calibration
- PT/1/A/0290/003 Encl 13.2 (Control Valve Movement At Power) in progress to test CV3 & CV4

Event No.	Malfunction No.	Event Type*	Event Description
0a	Override		AMSAC/DSS Bypassed
0b	Override		SASS in Manual
1		N: BOP, SRO	Turbine Control Valve Movement PT (CV3 & CV4)
2	Override	C: BOP, SRO	CCW Emergency Discharge Level Low
3	MPI121	I: BOP, SRO	PZR Level 1 Fails Low
4	Override	I: OATC, SRO (TS)	Inadvertent ES Channel 3 Actuation
5	MPI281	I: OATC, SRO	ΔT_c Controller Failure
6	Override	R: OATC, SRO (TS)	One Dropped Control Rod (Group 1 Rod 6) Requiring Manual Power Decrease
7	MPI290 MPI300 MEL120	M: ALL	ATWS (Loss of 1TA Switchgear) <ul style="list-style-type: none">• Turbine Fails to Trip• 1HP-26 Fails Closed
* (N)ormal, (R)eactivity, (I)nstrument, (C)omponent, (M)ajor			

SCENARIO 2 EVENT SUMMARY

- Event 1:** When the crew takes the shift, the BOP will perform PT/1/A/0290/003 Enclosure 13.2 (Control Valve Movement At Power) to test Turbine Control Valves CV3 & CV4. Once the test is complete, the Turbine Bypass Valves (TBVs) will be closed, returned to automatic, and the Standby EHC pump will be secured and placed in automatic.
- Event 2:** An OAC alarm will indicate that CCW Emergency Discharge Level is low. This will require the BOP to re-prime the Condenser Emergency Discharge Line in accordance with OP/1/A/1104/012 Enclosure 4.4 (Repriming Condenser Emergency Discharge Line).
- Event 3:** Pressurizer Level 1 will fail low which will cause 1HP-120 (RCS Volume Control) to open in an attempt to restore indicated Pressurizer level. The BOP will select Pressurizer level 2 or Pressurizer level 3 to restore normal RCS makeup flow.
- Event 4:** Engineered Safeguards (ES) Channel 3 will inadvertently actuate which will cause the 1A LPI Pump to start, 1LP-17 to open, and 'C' LPSW Pump to start. Once the crew determines that the ES actuation is not valid, the SRO will enter AP/1/A/1700/042 (Inadvertent ES Actuation) to restore the ES components to normal operation. The SRO will enter TS 3.3.7 and TS 3.7.7.
- Event 5:** The ΔT_c Controller will fail causing 1A Feedwater flow to increase and 1B Feedwater flow to decrease. Once alarms are received, the crew will perform Plant Transient Response to stabilize the plant. Once the plant is stable, the SRO will enter AP/1/A/1700/028 (ICS Instrument Failures) and ensure the appropriate ICS stations are in manual.
- Event 6:** One Control Rod (Group 1 Rod 6) will fully insert. Once alarms are received, the crew will perform Plant Transient Response to stabilize the plant. The SRO will enter AP/1/A/1700/001 (Unit Runback). Since ICS is in manual (from event 5), the OATC will perform a manual power decrease to $\leq 55\%$ power. The SRO will enter TS 3.1.4, TS 3.1.5, and TS 3.10.1.
- Event 7:** 1TA Switchgear will lockout and the Reactor will fail to trip automatically or manually (ATWS). The OATC will perform Rule 1 and the SRO will enter the UNPP tab of the EOP. The turbine will fail to trip using the Turbine Trip Pushbutton which will require the operator to lockout both EHC Pumps to prevent severe overcooling of the RCS. 1HP-26 will fail closed requiring 1HP-410 to be opened to allow full HPI flow from the BWST to borate the RCS and shutdown the Reactor.

Enclosure 13.18 *rev 75*

PT/1/A/1103/015

Shutdown margin Calculation at Power

Page 1 of 1

Performed By: _____ Date: _____ Time: _____

1. Purpose

- 1.1 The purpose of this enclosure is to perform a shutdown margin calculation while at power.

2. Procedure

NOTE: Step 2.1 applies only to control rod Groups 1 through 6. Group 7 and the APSRs may be positioned as required.

____ 2.1 **IF** any rod groups are **NOT** at 100% wd (other than Group 7 and the APSRs) due to CRD movement PT:

____ 2.1.1 Verify that only one group is **NOT** at 100% wd.

____ 2.1.2 Verify that the inserted group is $\geq 95\%$ wd.

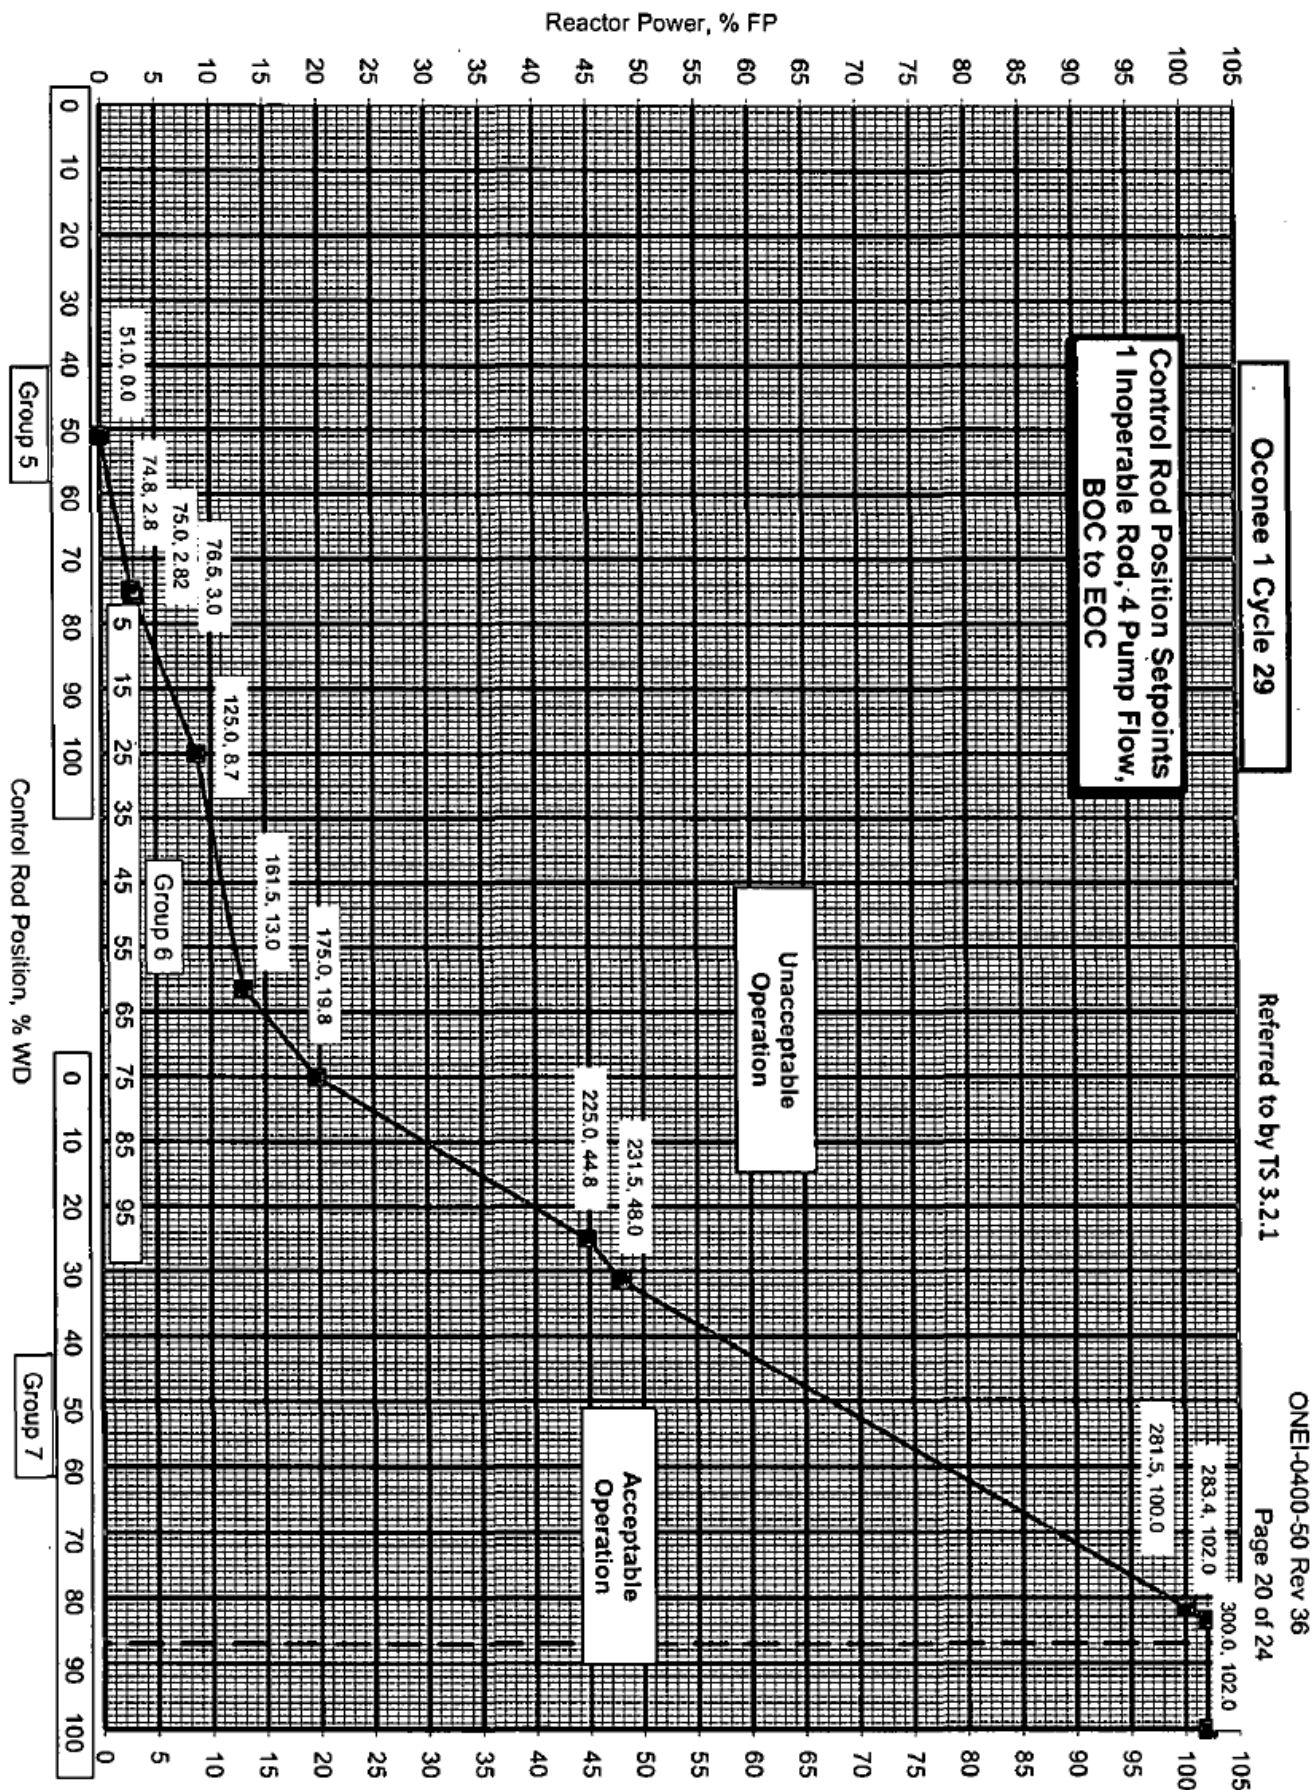

NOTE: For a dropped rod/stuck rod scenario, utilize the 1 inoperable rod graphs in the COLR. The rod position used should be the position of the controlling group (if the dropped/stuck rod is in the controlling group, the rod positions of the remaining rods in that group should be used, **NOT** the group average).

____ 2.2 Verify one of the following:

____ 2.2.1 Available shutdown margin is $\geq 1.00\% \Delta K/K$. This is shown by verifying that
IV the control rod position and power level are within the Acceptable Region or the Restricted Region on the appropriate curve for the number of RC Pumps and Inoperable rods in the COLR.

OR

____ 2.2.2 Appropriate actions are taken per TS 3.1.4, 3.1.5, and 3.2.1.

42. ___ WHEN directed by CR SRO, THEN EXIT this enclosure.	

... END ...

Rule 6**HPI****HPI Pump Throttling Limits**

- HPI must be throttled to prevent violating the RV-P/T limit.
- HPI pump operation must be limited to two HPIPs when only one BWST suction valve (1HP-24 or 1HP-25) is open.
- HPI must be throttled ≤ 475 gpm/pump (including seal injection for A header) when only one HPI pump is operating in a header.
- Total HPI flow must be throttled ≤ 950 gpm including seal injection when 1A and 1B HPI pumps are operating with 1HP-409 open.
- Total HPI flow must be throttled < 750 gpm when all the following exist:
 - LPI suction is from the RBES
 - piggyback is aligned
 - either of the following exist:
 - only one piggyback valve is open (1LP-15 or 1LP-16)
 - only one LPI pump operating
 - HPI may be throttled under the following conditions:

HPI Forced Cooling in Progress:	HPI Forced Cooling NOT in Progress:
<u>All</u> the following conditions must exist: <ul style="list-style-type: none">• <u>Core</u> SCM > 0• CETCs decreasing	<u>All</u> the following conditions must exist: <ul style="list-style-type: none">• <u>All</u> WR NIs $\leq 1\%$• <u>Core</u> SCM > 0• Pzr level increasing• CRS concurrence required if throttling following emergency boration

HPI Pump Minimum Flow Limit

- Maintain ≥ 170 gpm indicated/pump. This is an instrument error adjusted value that ensures a real value of ≥ 65 gpm/pump is maintained. HPI pump flow less than minimum is allowed for up to 4 hours.

CRITICAL TASKS

- CT-1** Lockout EHC Pumps to trip the Main Turbine prior to entry into PTS conditions (cooldown to $< 400^{\circ}\text{F}$ at $> 100^{\circ}\text{F}/\text{hour}$)
- CT-2** Prior to exiting the UNPP tab, take the Reactor subcritical (i.e. $< 1\%$ power on WR NIs)

SCENARIO 3 EVENT SUMMARY

- Event 1:** When the crew takes the shift, the SRO will direct the BOP to restore 1B Main FDW Pump from Handjack. Once proper operation of the FDW Pump Motor Gear Unit is verified, the 1B Main FDW Pump will be placed in automatic.
- Event 2:** 1HP-120 will fail closed which will cause RCS makeup to be lost. Pressurizer level will begin to decrease and Letdown Storage Tank level will begin to increase. Once the crew responds to the event and takes actions to stabilize RCS makeup and letdown, 1HP-120 will be repaired and the crew will place the valve back in automatic and restore normal operation.
- Event 3:** The 1D1 Heater Drain Pump (HDP) bearing temperatures will begin to increase due to low oil level. The OATC will perform a power decrease to $\leq 87\%$ with ICS in automatic. The BOP will start 1A and 1B FDW Pump Seal Injection Pumps and Auxiliary Oil Pumps prior to securing the 1D1 HDP.
- Event 4:** Controlling Narrow Range Tave will fail high. FDW flow will increase and Control Rods will insert in an attempt to restore normal parameters. Once alarms are received, the crew will perform Plant Transient Response to stabilize the plant. The OATC will decrease Feedwater flow and the BOP will insert Control Rods to restore the heat balance. Once the plant is stable, the SRO will enter AP/1/A/1700/028 (ICS Instrument Failures) and ensure the appropriate ICS stations are in manual and the BOP will perform an instrument surveillance for the failed instrument.
- Event 5:** The crew will receive alarms indicating high oil level in the 1A2 RCP Lower Oil Pot. The SRO will enter AP/1/A/1700/016 (Abnormal RCP Operation). Once the 1A2 RCP is secured, the OATC will be required to re-ratio FDW in order to stabilize the plant.
- Event 6:** The OATC will perform a manual power decrease to $\leq 70\%$ prior to the BOP securing the 1A2 RCP.
- Event 7:** The CT-1 Transformer (Startup Transformer) will lockout causing PCB-17 and PCB-18 to trip open. This will require the SRO to enter TS 3.8.1.
- Event 8:** A Switchyard Isolation will occur and seconds later the Reactor will trip causing a Blackout. The SRO will enter the Blackout Tab of the EOP. The Turbine Driven Emergency Feedwater Pump (TD EFDWP) will not automatically start which will require an operator to manually start the pump to restore heat removal from the core. Power will be restored in accordance with EOP Enclosure 5.38 (Restoration of Power) from a Keowee Hydro Unit.

... **END** ...

CRITICAL TASKS

- CT-1** ICS must be taken to HAND and FDW flow adjusted to prevent tripping the reactor on RPS Low Pressure (1810 psig) or RPS Variable Low Pressure. Adjustment will be dependent on how much time it takes to place ICS in HAND.
- CT-2** Start the TD EFDWP to supply Feedwater flow to the SGs for heat removal to preclude initiation of HPI Forced Cooling.
- CT-3** Restore power from Keowee Hydro Unit 1 prior to the completion of EOP Enclosure 5.38 (BWOOG CT-3).

SCENARIO 4 EVENT SUMMARY

- Event 1:** When the crew takes the shift, the SRO will direct the BOP will lower the level in the 1A Core Flood Tank using OP/1/A/1104/001 Enclosure 4.17.
- Event 2:** The OATC will increase power from below the POAH to $\approx 3.0\%$ and place ICS in automatic.
- Event 3:** The Auxiliary Oil Pump for the 1B FWPT will trip causing the Emergency Oil Pump to start. Per the Alarm Response Guide (ARG), the BOP will attempt to start the Auxiliary Oil Pump which will fail. Shortly afterwards, the alarm for FWPT 1B Emergency Oil Pump Overload will alarm which will require the candidate to attempt to start the Auxiliary Oil Pump. Not being able to start the pump, the ARG will direct the BOP to stop the Turning Gear Motor to prevent damaging the Feedwater Pump.
- Event 4:** The 1A Letdown Cooler will develop a leak. The SRO will enter AP/1/A/1700/018 (Abnormal Release of Radioactivity) and AP/1/A/1700/002 (Excessive RCS Leakage). AP/1/A/1700/002 will isolate the 1A Letdown Cooler. The SRO will enter TS 3.4.13
- Event 5:** The Work Control Center SRO will contact the control room stating that an AO reports that the Turbine Driven Emergency FDW Pump oil sump indicates no oil on the dipstick. The SRO should direct the OATC to place the TD EFDW pump switch in Pull To Lock (PTL). The SRO will enter TS 3.7.5 for an inoperable TD EFDW Pump.
- Event 6:** The 1RC-1 (Pressurize Spray Valve) will fail open causing RCS pressure to unexpectedly decrease. The operator will be required to close 1RC-3 (Pressurizer Spray Block Valve) in order to stop the pressure decrease and prevent tripping the Reactor.
- Event 7:** Two control rods will drop into the core requiring a manual Reactor trip. Once the Reactor is manually tripped in accordance with OMP 1-18 (Implementation Standards During Abnormal and Emergency Events), Event 8 will automatically initiate.
- Event 8:** When the Reactor trips, a Main Steam Line Break on the 1A Steam Generator will occur inside containment. Engineered Safeguards (ES) Channels 1-6 will actuate on high Reactor Building pressure. The SRO will enter the Excessive Heat Transfer tab and one RO will initiate Rule 5 (MSLB) while the other RO initiates EOP Enclosure 5.1 (ES Actuation). The Automatic Feedwater Isolation System (AFIS) will fail to actuate which will require an operator to manually isolate Feedwater to the 1A SG to prevent overcooling the RCS and Reactor Core. ES Channel 1 will fail to go to manual which will require an operator to override the Odd Voters to take manual control of ES Channel 1 components.

The user shall continue after the notification has been made.• Swapping from TBVs to ADVs prevents overfilling the hotwell/condenser.• Securing steam seals limits the water (condensation) that reaches the oil systems. Vacuum must be broken to secure steam seals.• Engineering will determine when to allow secondary system restart.• Beginning a cooldown assumes HPI is operating. If the SSF is supplying seals, then further discussion with the Management team should be undertaken prior to cooldown.	
<p>88. Notify the CR SRO to direct the following <u>as time and resources allow</u>:</p> <ul style="list-style-type: none">• Transfer steam control from TBVs to ADVs.<ul style="list-style-type: none">• Operate ADVs per U1 EOP Encl 5.24 (Operation of ADVs).• Begin Unit cool down to LPI per OP/1/A/1102/010 (Controlling Procedure For Unit Shutdown) <u>using the ADVs</u>.• Break vacuum per OP/1-2/A/1106/016 (Condenser Vacuum System).• Secure Steam Seals per OP/1/A/1106/13 (Steam Seal System).	
<p>89. WHEN directed by CR SRO, THEN EXIT.</p>	

Rule 6 ^{Rev 1}
HPI**HPI Pump Throttling**
Limits

- HPI must be throttled to prevent violating the RV-P/T limit.
- HPI pump operation must be limited to two HPIPs when only one BWST suction valve (1HP-24 or 1HP-25) is open.
- HPI must be throttled ≤ 475 gpm/pump (including seal injection for A header) when only One HPI pump is operating in a header.
- Total HPI flow must be throttled ≤ 950 gpm including seal injection when 1A and 1B HPI pumps are operating with 1HP-409 open.
- Total HPI flow must be throttled < 750 gpm when all the following exist:
 - LPI suction is from the RBES
 - piggyback is aligned
 - either of the following exist:
 - only one piggyback valve is open (1LP-15 or 1LP-16)
 - only one LPI pump operating
- HPI may be throttled under the following conditions:

HPI Forced Cooling in Progress:	HPI Forced Cooling NOT in Progress:
<u>All</u> the following conditions must exist: <ul style="list-style-type: none">• <u>Core</u> SCM > 0• CETCs decreasing	<u>All</u> the following conditions must exist: <ul style="list-style-type: none">• <u>All</u> WR NIs $\leq 1\%$• <u>Core</u> SCM > 0• Pzr level increasing• SRO concurrence required if throttling following emergency boration

HPI Pump Minimum Flow Limit

- Maintain ≥ 170 gpm indicated/pump. This is an instrument error adjusted value that ensures a real value of ≥ 65 gpm/pump is maintained. HPI pump flow less than minimum is allowed for up to 4 hours.

CRITICAL TASKS

- CT-1** The PZR Spray Valve (1RC-1) must be isolated by closing 1RC-3 to stop the RCS pressure decrease to prevent a reactor trip.
- CT-2** Manually isolate Feedwater to the 1A SG prior to entering PTS conditions (per Rule 8, a cooldown below 400°F at > 100°F/hour) to prevent overcooling the RCS and Reactor Core.

SIMULATOR OPERATOR JPM SETUP INSTRUCTIONS

1. **RECALL SNAP 211**
2. **IMPORT FILES** for RO-101b
3. Go to **RUN** to acknowledge alarms
4. **RESET** flags on HPIPs / LPIPs
5. Go to **FREEZE**
6. **ENSURE** clean copy of Rule 1 in place on Control Board
7. Go to **RUN** when directed by Lead Examiner

READ TO OPERATOR

DIRECTIONS TO STUDENT

I will explain the initial conditions, and state the task to be performed. All control room steps shall be performed for this JPM, including any required communications. I will provide initiating cues and reports on other actions when directed by you. Ensure you indicate to me when you understand your assigned task. To indicate that you have completed your assigned task return the handout sheet I provided you.

INITIAL CONDITIONS

Unit 1 is at 100% power

The CRS has determined that the reactor needs to be tripped

INITIATING CUES

The CRS directs you to trip the reactor and perform Immediate Manual Actions (IMAs).

START TIME: _____

SEQ STEP	PROC STEP	DESCRIPTION	
1	1 IMAs	<p>Depress REACTOR TRIP pushbutton.</p> <p><u>STANDARD:</u> Candidate performs EOP IMAs from memory (per OMP 1-18) and depresses the REACTOR TRIP pushbutton located on UB1. Candidate continues to Step 2.</p> <p><u>COMMENTS:</u></p>	<p>___ SAT</p> <p>___ UNSAT</p>
2	2 IMAs	<p>Verify reactor power < 5% FP and decreasing.</p> <p><u>STANDARD:</u> Candidate performs EOP IMAs from memory and verifies reactor power < 5% and decreasing and determines that reactor power is > 5% on all NIs. Candidate performs Step 2 RNO.</p> <p><u>COMMENTS:</u></p>	<p>___ SAT</p> <p>___ UNSAT</p>
3	2 RNO IMAs	<p>GO TO Rule 1 (ATWS/Unanticipated Nuclear Power Production).</p> <p><u>STANDARD:</u> Candidate refers to Rule 1 Step 1.</p> <p><u>COMMENTS:</u></p>	<p>___ SAT</p> <p>___ UNSAT</p>

4	1	<p>Verify <u>any</u> Power Range NI \geq 5% FP.</p> <p><u>STANDARD:</u> Candidate verifies any Power Range NI \geq 5% FP and determines that all Power Range NIs are $>$ 5% FP.</p> <p>Candidate continues to Step 2.</p> <p><u>COMMENTS:</u></p>	<p>___ SAT</p> <p>___ UNSAT</p>
5	2	<p>Initiate manual control rod insertion to the IN LIMIT.</p> <p><u>STANDARD:</u> Candidate initiates a manual control rod insertion by depressing the Manual pushbutton on the Diamond control panel and then locks the Control Rod Joystick in the INSERT (forward) position.</p> <p>Candidate continues to Step 3.</p> <p><u>COMMENTS:</u></p>	<p>CRITICAL STEP</p> <p>___ SAT</p> <p>___ UNSAT</p>
6	3	<p>Verify Main FDW is feeding the SGs.</p> <p><u>STANDARD:</u> Candidate determines Main FDW is feeding the SGs.</p> <p>Candidate continues to Step 4.</p> <p><u>COMMENTS:</u></p>	<p>___ SAT</p> <p>___ UNSAT</p>
7	4	<p>Notify CRS to GO TO UNPP tab</p> <p><u>STANDARD:</u> Candidate notifies the CRS to go to the UNPP tab of the EOP.</p> <p>Candidate continues to Step 5.</p> <p><u>COMMENTS:</u></p>	<p>___ SAT</p> <p>___ UNSAT</p>

8	5	<p>Open the following:</p> <p>___ 1HP-24</p> <p>___ 1HP-25</p> <p><u>STANDARD:</u> Candidate locates 1HP-24 and 1HP-25 on 1UB1 and rotates the switches to the open position. Candidate determines 1HP-24 and 1HP-25 do not open by observing the green closed lights illuminated and the red open lights off.</p> <p>Candidate continues to step 5 RNO.</p> <p><u>COMMENTS:</u></p>	<p>___ SAT</p> <p>___ UNSAT</p>

SIMULATOR OPERATOR JPM SETUP INSTRUCTIONS

1. **RECALL SNAP 212**
2. **IMPORT** RO-204 simulator files
3. **PLACE** a clean copy of OMP 2-02 Attachment G for 1A Letdown Filter in component boron log notebook
4. **ENSURE** clean procedures in place for candidate
5. Go To **RUN** when directed by the Lead Examiner

=====

Directions without a SNAP:

1. ***Initialize simulator to desired IC. (Example Recall IC-41 100% EOL)***
2. ***Take any required action: (Example: Perform EOP Encl.5.1, stop RCPs, open pump breakers, throttle EFDW flow etc.)***
3. ***Activate Malfunctions, Build Timers and Overrides as required:***
(Example: Activate MPS400 @ 100% on AOR)
4. ***Acknowledge alarms and Freeze the Simulator at desired point***
5. ***Save to a SNAP Number and password protect, as desired.***

READ TO OPERATOR

DIRECTIONS TO STUDENT

I will explain the initial conditions, and state the task to be performed. All control room steps shall be performed for this JPM, including any required communications. I will provide initiating cues and reports on other actions when directed by you. Ensure you indicate to me when you understand your assigned task. To indicate that you have completed your assigned task return the handout sheet I provided you.

INITIAL CONDITIONS

- Reactor power is 100%
- AP/1/A/1700/002 is in progress due to 1HP-14 failing in the BLEED position
- Another RO is making up to the LDST per Encl 5.5 of the EOP

INITIATING CUE

The CRS directs you to continue with AP/1/A/1700/002 (Excessive RCS Leakage) beginning at step 4.155

START TIME: _____

SEQ STEP	PROC STEP	DESCRIPTION	
1	4.155	<p>Verify 1A LD Filter in service.</p> <p><u>STANDARD:</u> Student observes 1B Letdown (LD) Filter is in service and the 1A LD Filter is NOT in service using either the OAC or Control Board indications and goes to the RNO.</p> <p><u>COMMENTS:</u></p>	<p>___ SAT</p> <p>___ UNSAT</p>
2	4.155 RNO	<p>1. IF 1A LD Filter is OOS for maintenance, THEN restore 1A LD Filter per in progress procedure. (N/A)</p> <p>2. Open 1HP-17</p> <p><u>STANDARD:</u> Student recognizes that 1A LD Filter is available.</p> <p>*Student opens 1HP-17 and observes the red open light ON and the green closed light OFF.</p> <p><i>Examiner Cue: If asked, notify candidate that 1A Letdown filter is NOT OOS for maintenance.</i></p> <p><u>COMMENTS:</u></p>	<p>*CRITICAL STEP</p> <p>___ SAT</p> <p>___ UNSAT</p>

SIMULATOR OPERATOR JPM SETUP INSTRUCTIONS

1. **RECALL SNAP 216**
2. **IMPORT** RO-604 simulator files
3. **ENSURE** KHU 1 in **REMOTE**
4. Go To **RUN** when directed by the Lead Examiner

=====

Directions without a SNAP:

1. ***Initialize simulator to desired IC.*** (Example Recall IC-41 100% EOL)
2. ***Take any required action:*** (Example: Perform EOP Encl.5.1, stop RCPs, open pump breakers, throttle EFDW flow etc.)
3. ***Activate Malfunctions, Build Timers and Overrides as required:***
(Example: Activate MPS400 @ 100% on AOR)
4. ***Acknowledge alarms and Freeze the Simulator at desired point***
5. ***Save to a SNAP Number and password protect, as desired.***

READ TO OPERATOR

DIRECTIONS TO STUDENT

I will explain the initial conditions, and state the task to be performed. All control room steps shall be performed for this JPM, including any required communications. I will provide initiating cues and reports on other actions when directed by you. Ensure you indicate to me when you understand your assigned task. To indicate that you have completed your assigned task return the handout sheet I provided you.

INITIAL CONDITIONS

Keowee Unit 1 is aligned to the Overhead.

Keowee Unit 1 is to be manually started and tied to the grid.

This is NOT an emergency.

OP/0/A/1106/19, Enclosure 4.5 (KHU-1 Manual Startup) is in progress

INITIATING CUE

The CRS directs you to continue with a manual start of Keowee Unit 1, and tie it to the grid with no load, per OP/0/A/1106/019, Enclosure 4.5 beginning at Step 2.1.

START TIME: _____

SEQ STEP	PROC STEP	DESCRIPTION	
1	2.1	<div> NOTE: AC HP Lift Pump starts and Generator Cooling Water valve opens when Unit 1 MASTER SELECTOR in MAN. </div> <p>Place UNIT 1 MASTER SELECTOR in "MAN"</p> <p><u>STANDARD:</u> Candidate positions UNIT 1 MASTER SELECTOR switch to "MAN".</p> <p>Continue to Step 2.2</p> <p><u>COMMENTS:</u></p>	CRITICAL STEP ____ SAT ____ UNSAT

1. **RECALL SNAP 218**
2. **IMPORT** files for RO-805a
3. **ENSURE** clean procedure in place for candidate
4. Go to **RUN** when directed by the Lead Examiner

=====

Directions without a SNAP:

1. ***Initialize simulator to desired IC.*** (Example Recall IC-41 100% EOL)
2. ***Take any required action:*** (Example: Perform EOP Encl.5.1, stop RCPs, open pump breakers, throttle EFDW flow etc.)
3. ***Activate Malfunctions, Build Timers and Overrides as required:***
(Example: Activate MPS400 @ 100% on AOR)
4. ***Acknowledge alarms and Freeze the Simulator at desired point***
5. ***Save to a SNAP Number and password protect, as desired.***

READ TO OPERATOR

DIRECTIONS TO STUDENT

I will explain the initial conditions, and state the task to be performed. All control room steps shall be performed for this JPM, including any required communications. I will provide initiating cues and reports on other actions when directed by you. Ensure you indicate to me when you understand your assigned task. To indicate that you have completed your assigned task return the handout sheet I provided you.

INITIAL CONDITIONS

Unit 1 was operating at 100% power

Unit 2 is in cold shutdown

The 2A1 condenser inlet expansion joint has ruptured and Turbine Building Basement water level is rising

Unit 1 has been tripped and the EOP is being completed by other team members.

INITIATING CUE

The CRS directs you to initiate Unit 1 AP/10 (Turbine Building Flood).

START TIME: _____

SEQ STEP	PROC STEP	DESCRIPTION	
1	4.1	<p>Trip the Rx.</p> <p><u>STANDARD:</u> Depress the Rx trip pushbutton on 1UB1. Verify the RX is tripped by observing all control rods are inserted.</p> <p>Continue to Step 4.2.</p> <p><u>COMMENTS:</u></p>	<p>___ SAT</p> <p>___ UNSAT</p>
2	4.2	<p>Place 1CCW-1-6 switch in PULL TO LOCK.</p> <p><u>STANDARD:</u> Candidate locates and places the control switch for 1CCW-1-6 in PULL TO LOCK.</p> <p>Continue to Step 4.3.</p> <p><u>COMMENTS:</u></p>	<p>___ SAT</p> <p>___ UNSAT</p>

3	4.3	<div data-bbox="370 195 1295 342" style="border: 1px solid black; padding: 5px; text-align: center;"> <u>NOTE</u> Tripping the CCW pumps will cause loss of condenser vacuum which will result in TBVs failing closed and trip of the MFDWPs. </div> <p>Ensure all CCW pumps are shutdown.</p> <p><u>STANDARD:</u> Candidate rotates the 1A, 1B, and 1C CCW pump switches to the TRIP position and verifies the red close lights extinguished and the white open lights illuminated. SIMULATOR OPERATOR JPM SETUP INSTRUCTIONS

1. **RECALL SNAP 214**
2. **IMPORT** simulator files for RO-P403
3. **ENSURE** clean in-progress Rule 3 available for candidate
4. **ENSURE** clean Rule 4 in place on control board
5. Go to **RUN** when directed by lead examiner

=====

Directions without a SNAP:

1. ***Initialize simulator to desired IC. (Example Recall IC-41 100% EOL)***
2. ***Take any required action: (Example: Perform EOP Encl.5.1, stop RCPs, open pump breakers, throttle EFDW flow etc.)***
3. ***Activate Malfunctions, Build Timers and Overrides as required:***
(Example: Activate MPS400 @ 100% on AOR)
4. ***Acknowledge alarms and Freeze the Simulator at desired point***
5. ***Save to a SNAP Number and password protect, as desired.***

READ TO OPERATOR

DIRECTIONS TO STUDENT

I will explain the initial conditions, and state the task to be performed. All control room steps shall be performed for this JPM, including any required communications. I will provide initiating cues and reports on other actions when directed by you. Ensure you indicate to me when you understand your assigned task. To indicate that you have completed your assigned task return the handout sheet I provided you.

INITIAL CONDITIONS

- Unit 1 has tripped following a total loss of feedwater
- IMAs are complete
- The crew has been performing Rule 3 (Loss of Main or Emergency FDW) to regain heat transfer
- CBP feed could NOT be established and PSW SG feed is NOT available
- Efforts to restore steam generator heat transfer per Rule # 3 have NOT been successful
- You are at the Step 23 (WHEN) step in Rule 3 (Loss of Main or Emergency FDW)

INITIATING CUE

The CRS directs you to review outstanding IAAT Steps

This JPM is Time Critical

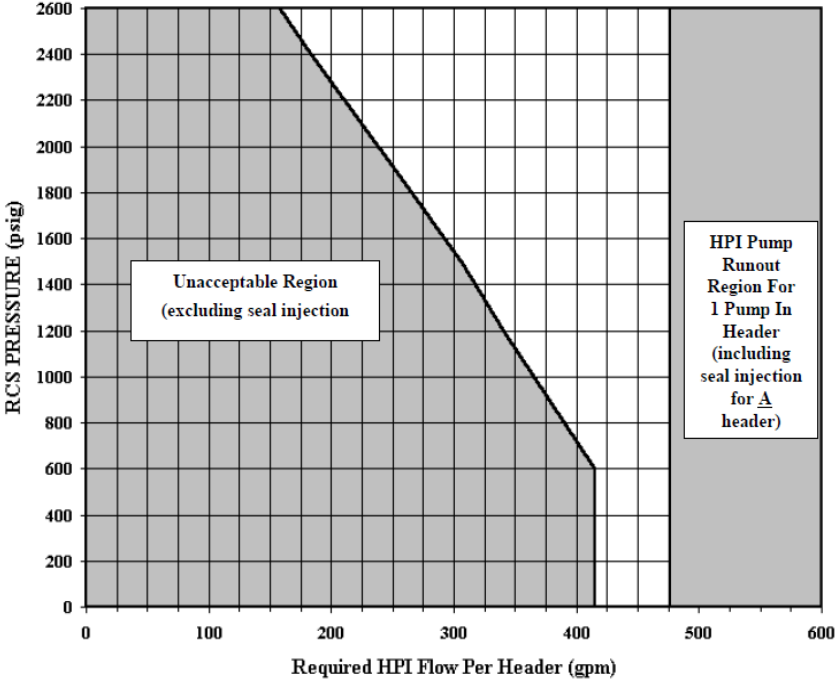

START TIME: _____

SEQ STEP	PROC STEP	DESCRIPTION	
1	<p>Rule 3</p> <p>IAAT Step 3</p>	<p>IAAT NO SGs can be fed with FDW (Main/CBP/Emergency/PSW), AND <u>any</u> of the following exist:</p> <ul style="list-style-type: none"> RCS pressure reaches 2300 psig OR NDT limit Pzr level reaches 375" [340" acc] <p>THEN PERFORM Rule 4 (Initiation of HPI Forced Cooling).</p> <p><u>STANDARD:</u> Candidate announces the initiation of Rule 4.</p> <p><i>Examiner Cue: If requested, provide concurrence (as CRS) for initiation of Rule 4.</i></p> <p><i>Examiner Note: This starts the 5 minute "Time critical" time clock.</i></p> <p><i>Time = _____.</i></p> <p><u>COMMENTS:</u></p>	<p>___ SAT</p> <p>___ UNSAT</p>

DIRECTIONS TO STUDENT

I will explain the initial conditions, and state the task to be performed. All control room steps shall be performed for this JPM, including any required communications. I will provide initiating cues and reports on other actions when directed by you. Ensure you indicate to me when you understand your assigned task. To indicate that you have completed your assigned task return the handout sheet I provided you.

INITIAL CONDITIONS

Unit 2 refueling outage in progress. Unit 2 CCW Condenser inlet piping has just been isolated. No tags are hung.

An explosion occurred that disabled the Unit 3 Control Room and operating crew.

AP/0/A/1700/046 (Extensive Damage Mitigation) was initiated.

Unit 3 is being maintained in hot shutdown from the SSF in accordance with AP/46.

The dedicated Submersible Pump is inoperable and cannot be installed.

Keowee Lake level is 798 feet.

INITIATING CUE

The Unit 2 CRS directs you to perform AP/0/A/1700/046, Encl. 5.9 (Supply of Water to SSF), beginning at step 7, to align the CCW Discharge back to the CCW inlet.

START TIME: _____

| 5 | This step is required to align the flow path from the CCW Discharge back to the CCW Inlet. |

CANDIDATE CUE SHEET

(TO BE RETURNED TO EXAMINER UPON COMPLETION OF TASK)

INITIAL CONDITIONS

Unit 2 refueling outage in progress. Unit 2 CCW Condenser inlet piping has just been isolated. No tags are hung.

An explosion occurred that disabled the Unit 3 Control Room and operating crew.

AP/0/A/1700/046 (Extensive Damage Mitigation) was initiated.

Unit 3 is being maintained in hot shutdown from the SSF in accordance with AP/46.

The dedicated Submersible Pump is inoperable and cannot be installed.

Keowee Lake level is 798 feet.

INITIATING CUE

The Unit 2 CRS directs you to perform AP/0/A/1700/046, Encl. 5.9 (Supply of Water to SSF), beginning at step 7, to align the CCW Discharge back to the CCW inlet.

READ TO OPERATOR

DIRECTIONS TO STUDENT

I will explain the initial conditions, and state the task to be performed. All control room steps shall be performed for this JPM, including any required communications. I will provide initiating cues and reports on other actions when directed by you. Ensure you indicate to me when you understand your assigned task. To indicate that you have completed your assigned task return the handout sheet I provided you.

INITIAL CONDITIONS

Unit 1 is at 80% RTP of Cycle 29

PT/1/A/0600/001 (Periodic Instrument Surveillance) Enclosure 13.1 (Mode 1&2) has just been initiated for your shift

OAC is unavailable.

No OAC alarms are present.

Transient Monitor is unavailable

INITIATING CUE

The Time = 2000 requirements on page 1 of 29 of PT/1/A/0600/001 (Periodic Instrument Surveillance), Enclosure 13.1 (Mode 1&2) are being performed. The CRS directs you to perform Step 1 and determine if the procedural requirements are met that will allow signing Step 1 as complete. Document your answer below.

START TIME: _____

SEQ STEP	PROC STEP	DESCRIPTION	
1	1	If Rx critical, perform the following: (R.M.)	
2	1.1	<p>Record Core Thermal Power Indication every 2 hours. (R.M.)</p> <p><u>STANDARD:</u> Candidate reviews the note prior to step 1.1 concerning priority of power Indications to use for surveillance and determines that A through E are not available due to the OAC and Transient Monitor being out of service.</p> <p>Candidate refers to the attached graphic and averages the four NI power ranges to determine (%) Reactor Power in accordance with Note 1.1F as follows:</p> <p>NI-5 = 80.1</p> <p>NI-6 = 79.9</p> <p>NI-7 = 79.8</p> <p>NI-8 = 80.0</p> <p>$80.1 + 79.9 + 79.8 + 80.0 = 319.8 / 4 = \mathbf{79.95}$</p> <p>Candidate records 79.95 in the % Reactor Power (R.M.) column at 2000 and initials the Step 1.1 (R.M.) column at 2000.</p> <p><u>COMMENTS:</u></p>	<p>___ SAT</p> <p>___ UNSAT</p>
3	1.2	<p>Verify <u>NO</u> CTP OAC alarms <u>OR</u> CTP OAC alarm response in progress. (R.M.)</p> <p><u>STANDARD:</u> Candidate determines there are no CTP OAC alarms. The OAC is unavailable. Candidate initials the Step 1.2 (R.M.) column at 2000.</p> <p><u>COMMENTS:</u></p>	<p>___ SAT</p> <p>___ UNSAT</p>

4	1.3	Verify diverse reactor power indications within $\pm 2\%$ per <u>one</u> of the following:	
5	1.3.1	<p>Compare the following: (refer to Note 1.1)</p> <ul style="list-style-type: none"> OAC Calculated Thermal Power Best <p><u>OR</u></p> <ul style="list-style-type: none"> OAC Calculated Thermal Power Secondary (if above ~ 25% power) <p><u>OR</u></p> <ul style="list-style-type: none"> OAC Calculated Thermal Power Primary (if below ~ 25% power) <p>versus</p> <ul style="list-style-type: none"> OAC Calculated Thermal Power Delta T <p><u>STANDARD:</u> Candidate determines these indications are not available due to the OAC being out of service and proceeds to step 1.3.2.</p> <p><u>COMMENTS:</u></p>	<p>___ SAT</p> <p>___ UNSAT</p>

6	1.3.2	<p>Compare the following:</p> <ul style="list-style-type: none"> Average of NI-5, NI-6, NI-7, and NI-8 (refer to Note 1.1.F) <p><u>OR</u></p> <ul style="list-style-type: none"> PID A5081 ICS Calculated Thermal Power Best available from the Transient Monitor. See Note 1.1.E above. <p>versus</p> <ul style="list-style-type: none"> Average two RC Loop ΔTs from RC Loop ΔT gauge and use Enclosure "Loop ΔT Vs Reactor Power" to determine percent power from ΔT <p><u>STANDARD:</u> Candidate refers to the attached graphic and averages the four NI power ranges, or uses the value for reactor power recorded per step 1.1, since PID A5081 ICS Calculated Thermal Power Best is not available from the Transient Monitor.</p> <p>NI-5 = 80.1 NI-6 = 79.9 NI-7 = 79.8 NI-8 = 80.0</p> <p>$80.1 + 79.9 + 79.8 + 80.0 = 319.8 / 4 = \mathbf{79.95}$ [Acceptable band = 79.9 – 80.0]</p> <p><u>COMMENTS:</u></p>	<p>CRITICAL STEP</p> <p>___ SAT</p> <p>___ UNSAT</p>
---	-------	--	---

7	1.3.2 con't.	<p>Compare the following:</p> <ul style="list-style-type: none"> Average of NI-5, NI-6, NI-7, and NI-8 (refer to Note 1.1.F) <p><u>OR</u></p> <ul style="list-style-type: none"> PID A5081 ICS Calculated Thermal Power Best available from the Transient Monitor. See Note 1.1.E above. <p>versus</p> <ul style="list-style-type: none"> Average two RC Loop ΔTs from RC Loop ΔT gauge and use Enclosure "Loop ΔT Vs Reactor Power" to determine percent power from ΔT <p><u>STANDARD:</u> Candidate refers to the attached graphic and averages the Loop A and Loop B ΔT indications:</p> <p style="padding-left: 40px;">Loop A = 37.2 Loop B = 37.4 $37.2 + 37.4 = 74.6 / 2 = 37.3^{\circ}\text{F}$ [Acceptable band = $37^{\circ}\text{F} - 37.3^{\circ}\text{F}$]</p> <p><u>COMMENTS:</u></p>	<p>CRITICAL STEP</p> <p>___ SAT</p> <p>___ UNSAT</p>
8	1.3.2 con't.	<p>Compare the following:</p> <ul style="list-style-type: none"> Average of NI-5, NI-6, NI-7, and NI-8 (refer to Note 1.1.F) <p><u>OR</u></p> <ul style="list-style-type: none"> PID A5081 ICS Calculated Thermal Power Best available from the Transient Monitor. See Note 1.1.E above. <p>versus</p> <ul style="list-style-type: none"> Average two RC Loop ΔTs from RC Loop ΔT gauge and use Enclosure "Loop ΔT Vs Reactor Power" to determine percent power from ΔT <p><u>STANDARD:</u> Candidate refers to PT/1/A/0600/001, Enclosure 13.11 (Loop ΔT Vs Reactor Power), and using 37.3°F determines that Reactor Power from ΔT is 85% ($\pm 2\%$).</p> <p><u>COMMENTS:</u></p>	<p>CRITICAL STEP</p> <p>___ SAT</p> <p>___ UNSAT</p>

9	1.3.2 con't.	<p>Compare the following:</p> <ul style="list-style-type: none"> Average of NI-5, NI-6, NI-7, and NI-8 (refer to Note 1.1.F) <p><u>OR</u></p> <ul style="list-style-type: none"> PID A5081 ICS Calculated Thermal Power Best available from the Transient Monitor. See Note 1.1.E above. <p>versus</p> <ul style="list-style-type: none"> Average two RC Loop ΔTs from RC Loop ΔT gauge and use Enclosure "Loop ΔT Vs Reactor Power" to determine percent power from ΔT <p><u>STANDARD:</u> Candidate compares the average of NI-5, NI-6, NI-7, and NI-8 (79.9 - 80%) to the percent power from ΔT acquired from Enclosure 13.11 (Loop ΔT Vs Reactor Power) (85% \pm 2%), and determines the values are NOT within \pm 2%. Therefore step 1.3 cannot be signed off as complete.</p> <p><i>EXAMINER NOTE: The candidate may stop prior to performing step 10 when they determine procedure step 1.3 cannot be signed off as complete. If so, the task will end here at step 9 and step 10 will not be performed.</i></p> <p><u>COMMENTS:</u></p>	<p>CRITICAL STEP</p> <p>___ SAT</p> <p>___ UNSAT</p>
---	-----------------	---	---

10	1.4	<p>Verify CTPD set \leq 100%. (R.M.)</p> <p><u>STANDARD:</u> Candidate refers to the attached graphic of the Load Control Panel (LCP) and determines CTPD set = 80%. Candidate initials the Step 1.4 (R.M.) column at 2000.</p> <p><i>EXAMINER NOTE: The candidate may stop prior to performing step 10 when they determine procedure step 1.3 cannot be signed off as complete. If so, the task will end at step 9 and step 10 will not be performed.</i></p> <p><u>COMMENTS:</u></p> <p>END TASK</p>	<p>___ SAT</p> <p>___ UNSAT</p>
----	-----	---	---------------------------------

TIME STOP: _____

CRITICAL STEP EXPLANATIONS

SEQ STEP #	Explanation
6	This step is required to determine % Rx Power from the average of NI-5, 6, 7, and 8.
7	This step is required to determine the correct ΔT to use.
8	This step is required to determine % Rx Power from ΔT .
9	This step is required to determine if the acceptance criteria for the step has been met.

SIMULATOR OPERATOR JPM SETUP INSTRUCTIONS

None

READ TO OPERATOR

DIRECTIONS TO STUDENT

I will explain the initial conditions, and state the task to be performed. All control room steps shall be performed for this JPM, including any required communications. I will provide initiating cues and reports on other actions when directed by you. Ensure you indicate to me when you understand your assigned task. To indicate that you have completed your assigned task return the handout sheet I provided you.

INITIAL CONDITIONS

Oconee Unit 1 OAC computer repairs are expected to be extended through turnover for hardware replacement.

The Loss of Computer procedure PT/0/A/0600/001A (Loss of Computer) is in progress, however an RCS Leakage Calculation has not been performed during this shift.

INITIATING CUES

The CRS directs you to perform a manual RCS leakage calculation per PT/1/A/0600/010 (Reactor Coolant Leakage) Encl. 13.3 (Manual RCS Leakage Calculation Data Sheet) using the data collected below.

Manual RCS Leakage Data

Parameter	Initial	Final
Time	0015	0115
Pzr level	219.0 inches	220.7 inches
Tave Indication	579.0°F	579.3°F
Quench Tank Level	86.5 inches	86.5 inches
LDST Level	76.7 inches	76.1 inches
Power Range NI	100.0%	100.1%
RCS NR Pressure	2150 psig	2150 psig
Group 7 Control Rod Position	92.7%	92.7%

CANDIDATE CUE SHEET

(TO BE RETURNED TO EXAMINER UPON COMPLETION OF TASK)

INITIAL CONDITIONS

Oconee Unit 1 OAC computer repairs are expected to be extended through turnover for hardware replacement.

The Loss of Computer procedure PT/0/A/0600/001A (Loss of Computer) is in progress, however an RCS Leakage Calculation has NOT been performed during this shift.

INITIATING CUE

The CRS directs you to perform a manual RCS leakage calculation per PT/1/A/0600/010 (Reactor Coolant Leakage) Encl. 13.3 (Manual RCS Leakage Calculation Data Sheet) using the data collected below.

Manual RCS Leakage Data

Parameter	Initial	Final
Time	0015	0115
Pzr level	219.0 inches	220.7 inches
Tave Indication	579.0°F	579.3°F
Quench Tank Level	86.5 inches	86.5 inches
LDST Level	76.7 inches	76.1 inches
Power Range NI	100.0%	100.1%
RCS NR Pressure	2150 psig	2150 psig
Group 7 Control Rod Position	92.7%	92.7%

*Similar to SRO JPM ADM-S204 and must be performed on the same day

READ TO OPERATOR

DIRECTIONS TO STUDENT

I will explain the initial conditions, and state the task to be performed. All control room steps shall be performed for this JPM, including any required communications. I will provide initiating cues and reports on other actions when directed by you. Ensure you indicate to me when you understand your assigned task. To indicate that you have completed your assigned task return the handout sheet I provided you.

INITIAL CONDITIONS

OP/1/A/1102/010 (Controlling Procedure for Unit Shutdown) is in progress for entering a refueling outage

Plant conditions are as described in the attachment provided

CRS has just been notified that the 1HP-120 travel stop is NOT installed correctly

INITIATING CUE

In accordance with Limit and Precaution 2.12 of OP/1/A/1104/049 (Low Temperature Overpressure Protection), determine if LTOP requirements are still met. Document your determination as directed in the Limit and Precaution.

Once you have completed the determination, sign and date in the blanks provided on Enclosure 4.13 (LTOP Requirements Logic Diagram) and return it to the examiner.

START TIME: _____

SEQ STEP	PROC STEP	DESCRIPTION

Unit 1 Conditions For Determining LTOP Requirements

Procedures in progress:

OP/1/A/1102/010, Controlling Procedure for Unit Shutdown

- Encl. 4.10, S/D from Mode 3 to Mode 4 in progress

RCS Parameters:

- Tc = 225°F slowly decreasing
- RCS Pressure = 285 psig decreasing
- Pressurizer Level = 218 inches decreasing slowly
- LPI operation (Series Mode) in progress

Primary Systems/Components status:

- All HPI pumps are OFF
- 1B and 1C HPI Pumps are racked out and tagged
- 1A HPI Pump is racked in the TEST position and tagged
- HPI START FROM PSW POWER CR switch tagged "Do Not Operate"
- 1HP-26 and 1HP-27 are closed; hand wheels tagged and breakers tagged open
- 1HP-409 switch in CR has been tagged closed
- 1HP-410 switch in CR is closed but not tagged
- 1CF-1 is Closed / handwheel tagged and breaker tagged open
- 1CF-2 is Closed / handwheel tagged and breaker not tagged open
- 1A CFT pressure = 375 psig stable
- 1B CFT pressure = 368 psig stable
- Computer point O1L3153 is not in alarm
- Computer points O1X2285 and O1X2256 are locked out
- 1SA-2/C-3, 1SA-2/C-4, 1SA-18/A-3, and 1SA-18/A-4 cards are not pulled and not in alarm
- OAC is Operable
- 1N-121 is closed and tagged
- Pressurizer Heater Bank 4 is deactivated with breaker white tagged
- No dedicated LTOP Operator available
- An LTOP Vent path (≥ 3.6 square inches) is not established
- 1RC-4 is open
- PORV is operable with setpoint selected to LOW

SIMULATOR OPERATOR JPM SETUP INSTRUCTIONS

1. **NONE**

READ TO OPERATOR

DIRECTIONS TO STUDENT

I will explain the initial conditions, and state the task to be performed. All control room steps shall be performed for this JPM, including any required communications. I will provide initiating cues and reports on other actions when directed by you. Ensure you indicate to me when you understand your assigned task. To indicate that you have completed your assigned task return the handout sheet I provided you.

INITIAL CONDITIONS

You are a Reactor Operator. An event has occurred which resulted in a significant change in the radiological conditions in Room 61 (LPI and RBS Pumps).

Your total whole body dose this year is 986 mrem.

INITIATING CUE

Using the survey map provided, determine the following for Room 61:

- The RP related area posting(s) you would expect to encounter at the entry to Room 61
- If Continuous RP coverage is required for you to perform venting of the 1A LPI Pump
- If venting the 1A LPI pump takes two (2) hours, determine your total accumulated annual dose when the job is complete and you have exited the room based on the following:
 - 10 minutes spent at 1A LPI Pump initiating the vent
 - 1 hour 45 minutes spent in the LDWA
 - 5 minutes spent at 1A LPI Pump securing the vent

START TIME: _____

SEQ STEP	PROC STEP	DESCRIPTION	
1		<p>Using the survey map provided, determine the area posting requirements.</p> <p><u>STANDARD:</u> Candidate reviews the survey map and determines:</p> <ul style="list-style-type: none"> Based on an area around LPI sump pumps being 930 mr/hr (> 100 mr/hr at 30 cm), the area should be posted as a High Radiation Area (HRA). <p><u>COMMENTS:</u></p>	<p>CRITICAL STEP</p> <p>___ SAT</p> <p>___ UNSAT</p>
2		<p>Determine RP coverage required to vent the 1A LPI Pump</p> <p><u>STANDARD:</u> Candidate determines that continuous RP coverage is NOT required since the area is a HRA.</p> <p><u>COMMENTS:</u></p>	<p>CRITICAL STEP</p> <p>___ SAT</p> <p>___ UNSAT</p>
3		<p>Determine total accumulated annual dose after completion of job.</p> <p><u>STANDARD:</u> Candidate determines the dose as a result of the venting as follows:</p> <p>.25 hours X 92 mr/hr = 23 mrem</p> <p>1.75 hours X 28 mr/hr = 49 mrem</p> <p>23 + 49 = 72 mrem</p> <p>Determine the total accumulated annual dose following completion of the job.</p> <p>986 + 72 = 1058 mrem</p> <p><u>COMMENTS:</u></p> <p>END OF TASK</p>	<p>CRITICAL STEP</p> <p>___ SAT</p> <p>___ UNSAT</p>

I will provide initiating cues and reports on other actions when directed by you. Ensure you indicate to me when you understand your assigned task. To indicate that you have completed your assigned task return the handout sheet I provided you.

INITIAL CONDITIONS

You are a Shift Manager qualified SRO. Today is 10/29/16. Your work history for October of this year is as follows:

- | | |
|----------|---|
| 10/05/16 | Worked 10 hours as Unit 3 BOP (day shift). Took turnover at beginning of shift and gave turnover at the end. |
| 10/06/16 | Worked 12 hours as Unit 3 BOP (day shift). Took turnover at beginning of shift and gave turnover at end of shift. |
| 10/07/16 | Worked 12 hours as Unit 3 OATC (day shift). Took turnover at beginning of shift and gave turnover at end of shift. |
| 10/12/16 | Worked 12 hours as Unit 1 BOP (night shift). Took turnover at beginning of shift and gave turnover at end of shift. |
| 10/13/16 | Worked 12 hours (night shift). Worked 3 hours as the SM and then 9 hours as WCC SRO. Took turnover at beginning and gave turnover at the end for his SM position and his WCC SRO position . |
| 10/14/16 | Worked 12 hours as Unit 1 CR SRO (night shift). Took turnover at beginning of shift and gave turnover at end of shift. |
| 10/20/16 | Worked 12 hours as Unit 3 OATC (day shift). Took turnover at beginning of shift and gave turnover at end of shift. |

INITIATING CUE

The SM directs you to review your work history for October, complete Section 3 of form NSD 512-1 based on the above work history, and determine if you meet NSD 512 requirements to maintain an active license for the following quarter for the following positions. Circle the appropriate response.

OATC	YES	NO	BOP	YES	NO
CRS	YES	NO	SM	YES	NO

START TIME: _____

SEQ STEP	PROC STEP	DESCRIPTION

READ TO OPERATOR

DIRECTIONS TO STUDENT

I will explain the initial conditions, and state the task to be performed. All control room steps shall be performed for this JPM, including any required communications. I will provide initiating cues and reports on other actions when directed by you. Ensure you indicate to me when you understand your assigned task. To indicate that you have completed your assigned task return the handout sheet I provided you.

INITIAL CONDITIONS

OP/1/A/1102/010 (Controlling Procedure for Unit Shutdown) is in progress for entering a refueling outage

Plant conditions are as described in the attachment provided

CRS has just been notified that the 1HP-120 travel stop is NOT installed correctly

INITIATING CUE

In accordance with Limit and Precaution 2.12 of OP/1/A/1104/049 (Low Temperature Overpressure Protection), determine if LTOP requirements are still met. Document your determination as directed in the Limit and Precaution.

Once you have completed the determination, sign and date in the blanks provided on Enclosure 4.13 (LTOP Requirements Logic Diagram) and list Tech Spec required actions, if any, below.

START TIME: _____

SEQ STEP	PROC STEP	DESCRIPTION	
1		<p><u>EXAMINER NOTE:</u> The sequence of steps is NOT critical</p> <p>Determine if LTOP Train 1 requirements are met</p> <p><u>STANDARD:</u> Candidate Refers to OP/1/A/1104/049 (LTOP) Encl. 4.13 and attachment and circles the following:</p> <ul style="list-style-type: none"> • RC-4 open • PORV Auto Operable <p><u>COMMENTS:</u></p>	<p>CRITICAL STEP</p> <p>___ SAT</p> <p>___ UNSAT</p>
2		<p>Indicate the path that satisfies LTOP requirements for Train 1</p> <p><u>STANDARD:</u> Candidate should circle the plant/equipment configuration status and trace the logic path that satisfies Train 1 LTOP requirements as indicated on the attached key</p> <p><u>COMMENTS:</u></p>	<p>___ SAT</p> <p>___ UNSAT</p>

3		<p>Determine if upper portion LTOP Train 2 requirements are met</p> <p><u>STANDARD:</u> Candidate Refers to OP/1/A/1104/049 (LTOP) Encl. 4.13 and attachment and circles the following:</p> <ul style="list-style-type: none"> • 1A & 1B HPIP's racked out or in test, and tagged • HPI START FROM PSW POWER CR switch tagged "Do Not Operate" • 1C HPIP bkr racked out or in test, and tagged • 1CF-1 Closed/handwheel tagged and bkr tagged open • 1B CFT depressurized to < 373 psig <p><i>Examiner Note: Candidate may indicate additional equipment as meeting LTOP requirements, but only the equipment listed above that satisfies the logic of Enclosure 4.13 is critical.</i></p> <p><u>COMMENTS:</u></p>	<p>CRITICAL STEP</p> <p>___ SAT</p> <p>___ UNSAT</p>
4		<p>Indicate the path that satisfies LTOP requirements for the upper portion of Train 2</p> <p><u>STANDARD:</u> Candidate should circle the plant/equipment configuration status and trace the logic path that satisfies the upper portion of Train 2 LTOP requirements as indicated on the attached key</p> <p><u>COMMENTS:</u></p>	<p>___ SAT</p> <p>___ UNSAT</p>

5		<p>Determine if lower portion LTOP Train 2 requirements are met</p> <p><u>STANDARD:</u> Candidate Refers to OP/1/A/1104/049 (LTOP) Encl. 4.13 and attachment and circles the following:</p> <ul style="list-style-type: none"> • HPI NOT in operation and aligned via 1HP-120 • LTOP computer point O1L3153 not in alarm • 1SA-2/C-3, C-4 cars not pulled/not in alarm "HIGH" • 1SA-18/A-3 card not pulled/not in alarm • 1SA-18/A-4 card not pulled/not in alarm • OAC operable • Pzr Htr Bank 4 Deactivated • RCS pressure within limits • Pzr level within limits <p>Candidate determines the lower portion of Train 2 is NOT satisfied due to 1N-121 being closed only (NOT tagged closed).</p> <p><u>COMMENTS:</u></p>	<p>CRITICAL STEP</p> <p>___ SAT</p> <p>___ UNSAT</p>
6		<p>Indicate the path that satisfies LTOP requirements for the lower portion of Train 2</p> <p><u>STANDARD:</u> Candidate determines the lower portion of Train 2 is not satisfied due to 1N-121 being closed only (NOT tagged closed).</p> <p><u>COMMENTS:</u></p>	<p>___ SAT</p> <p>___ UNSAT</p>
7		<p>Indicate that the logic path for LTOP requirements is satisfied</p> <p><u>STANDARD:</u> Candidate determines the logic path for LTOP requirements is NOT satisfied due to 1N-121 being closed only (NOT tagged closed).</p> <p><u>COMMENTS:</u></p>	<p>CRITICAL STEP</p> <p>___ SAT</p> <p>___ UNSAT</p>

8		<p>Fill in the “Performed By” and “Date/Time” blanks</p> <p><u>STANDARD:</u> Candidate completes the “Performed By” and “Date/Time” blanks</p> <p><u>COMMENTS:</u></p>	<p>___ SAT</p> <p>___ UNSAT</p>
9		<p>Determine required actions.</p> <p><u>STANDARD:</u> Candidate determines compensatory measures to monitor for initiation of an LTOP event (dedicated LTOP operator) must be established within 4 hours, in accordance with Tech Spec 3.4.12 Cond. F.</p> <p><u>COMMENTS:</u></p> <p>END TASK</p>	<p>CRITICAL STEP</p> <p>___ SAT</p> <p>___ UNSAT</p>

TIME STOP: _____

CRITICAL STEP EXPLANATIONS

SEQ STEP #	Explanation
1	Required to determine if Train 1 requirements are met
3	Required to determine if Train 2 requirements are met
5	Required to determine if Train 2 requirements are met
7	Required to determine if all LTOP requirements are met
9	Required to determine required actions.

CANDIDATE CUE SHEET

(TO BE RETURNED TO EXAMINER UPON COMPLETION OF TASK)

INITIAL CONDITIONS

OP/1/A/1102/010 (Controlling Procedure for Unit Shutdown) is in progress for entering a refueling outage

Plant conditions are as described in the attachment provided

CRS has just been notified that the 1HP-120 travel stop is NOT installed correctly

INITIATING CUE

In accordance with Limit and Precaution 2.12 of OP/1/A/1104/049 (Low Temperature Overpressure Protection), determine if LTOP requirements are still met. Document your determination as directed in the Limit and Precaution.

Once you have completed the determination, sign and date in the blanks provided on Enclosure 4.13 (LTOP Requirements Logic Diagram) and list Tech Spec required actions, if any, below.

(TO BE RETURNED TO EXAMINER UPON COMPLETION OF TASK)

Unit 1 Conditions For Determining LTOP Requirements

Procedures in progress:

OP/1/A/1102/010, Controlling Procedure for Unit Shutdown

- Encl. 4.10, S/D from Mode 3 to Mode 4 in progress

RCS Parameters:

- Tc = 225°F slowly decreasing
- RCS Pressure = 285 psig decreasing
- Pressurizer Level = 218 inches decreasing slowly
- LPI operation (Series Mode) in progress

Primary Systems/Components status:

- All HPI pumps are OFF
- 1B and 1C HPI Pumps are racked out and tagged
- 1A HPI Pump is racked in the TEST position and tagged
- HPI START FROM PSW POWER CR switch tagged "Do Not Operate"
- 1HP-26 and 1HP-27 are closed; hand wheels tagged and breakers tagged open
- 1HP-409 switch in CR has been tagged closed
- 1HP-410 switch in CR is closed but not tagged
- 1CF-1 is Closed / handwheel tagged and breaker tagged open
- 1CF-2 is Closed / handwheel tagged and breaker not tagged open
- 1A CFT pressure = 375 psig stable
- 1B CFT pressure = 368 psig stable
- Computer point O1L3153 is not in alarm
- Computer points O1X2285 and O1X2256 are locked out
- 1SA-2/C-3, 1SA-2/C-4, 1SA-18/A-3, and 1SA-18/A-4 cards are not pulled and not in alarm
- OAC is Operable
- 1N-121 is closed
- Pressurizer Heater Bank 4 is deactivated with breaker white tagged
- No dedicated LTOP Operator available
- An LTOP Vent path (≥ 3.6 square inches) is not established
- 1RC-4 is open
- PORV is operable with setpoint selected to LOW

SIMULATOR OPERATOR JPM SETUP INSTRUCTIONS

None

READ TO OPERATOR

DIRECTIONS TO STUDENT

I will explain the initial conditions, and state the task to be performed. All control room steps shall be performed for this JPM, including any required communications. I will provide initiating cues and reports on other actions when directed by you. Ensure you indicate to me when you understand your assigned task. To indicate that you have completed your assigned task return the handout sheet I provided you.

INITIAL CONDITIONS

Time: 3 hours ago:

- The Oconee County Sheriff reported that a large group of “anti-nukes” had assembled at the Visitor Center

CURRENT CONDITIONS

- ALL three Unit's at 100% power
- Oconee County Sheriff reports that an explosion has occurred at the Keowee Hydro Dam, however the dam shows only minor damage with no breach
- Keowee personnel report no visible damage to the KHUs
- Security Shift Supervisor notifies the SM that security is responding to armed adversaries in the vicinity of the Unit 1 Main Transformer

INITIATING CUE

You are to perform the required actions of the Emergency Coordinator by referring to RP/0/A/1000/01, Emergency Classification:

1. Determine Emergency Classification at present time.
2. Complete appropriate Emergency Notification Form (ENF) for the current conditions.

Inform the examiner when you have made the classification.

THIS IS A TIME CRITICAL JPM

Note: Do not use Emergency Coordinator's judgment as the basis for classifying the event. When required, an operator will maintain the Emergency Coordinator's Log and assume the duties of the Control Room Offsite Communicator.

START TIME: _____

SEQ STEP	PROC STEP	DESCRIPTION	
1		<p>Classify the Event</p> <p><u>STANDARD:</u> Refer to RP/0/A/1000/01 (Emergency Classification) Enclosure 4.6 (Fire/Explosions and Security Actions). Classify the event as a “Site Area Emergency”(4.6.S.1) due to the following: <i>A HOSTILE ACTION is occurring or has occurred within the PROTECTED AREA as reported by Security Shift Supervision</i></p> <p>STOP TIME #1: Time SAE Declared _____ (Actual time) (SAT is < Start Time + 15 minutes)</p> <p><u>COMMENTS:</u></p>	<p>CRITICAL STEP</p> <p>___ SAT</p> <p>___ UNSAT</p>
2	1.1	<p>Commence the Off-Site Notification Form.</p> <p><u>STANDARD:</u> Go to RP/0/A/1000/002 (Control Room Emergency Coordinator Procedure) and initiate procedure by determining symptoms for entry exist and check Step 1.1</p> <p><u>COMMENTS:</u></p>	<p>___ SAT</p> <p>___ UNSAT</p>
3	2.1	<p><u>IF</u> an EAL exists, Declare the appropriate Emergency Classification level. Classification <u> SAE </u> (UE, ALERT, SAE, GE) Time Declared: _____</p> <p><u>STANDARD:</u> Candidate documents SAE and time declared from step 1.</p> <p><u>COMMENTS:</u></p>	<p>___ SAT</p> <p>___ UNSAT</p>

4	2.2	<p>IF a Security event is in progress THEN GO TO Step 2.4</p> <p><u>STANDARD:</u> Determine Step 2.2 does apply and GO TO Step 2.4</p> <p><u>COMMENTS:</u></p>	<p>___ SAT</p> <p>___ UNSAT</p>
5	2.4	<p>Direct Control Room Offsite Communicator(s) to perform the following:</p> <ul style="list-style-type: none"> Record Name _____ REFER TO RP/0/A/1000/015 A (Offsite Communications From The Control Room), Immediate Actions steps 2.1 and 2.2 AND Enclosure 4.7 (Guidelines for Manually Transmitting a Message) in <u>preparation</u> for notifying offsite agencies. <p><u>STANDARD:</u> Any name (real or imaginary) is acceptable. Continue to step 2.5</p> <p><u>COMMENTS:</u></p>	<p>___ SAT</p> <p>___ UNSAT</p>
6	2.5	<p>IF AT ANY TIME changing plant conditions require an emergency classification upgrade, ...</p> <p><u>STANDARD:</u> An upgrade is not expected. Candidate should circle the step number and continue to step 2.6.</p> <p><u>COMMENTS:</u></p>	<p>___ SAT</p> <p>___ UNSAT</p>

7	2.6	<div data-bbox="383 222 1279 583" style="border: 1px solid black; padding: 10px;"> <p>NOTE: If more than one EAL of a classification level is met, use the EAL description of the most interest to offsite agencies.</p> <p>Additional message sheets listing other information of interest to offsite agencies (e.g. transporting injured personnel) may be sent, if needed.</p> <p>For the case of more than one unit with different EAL entry conditions, the SM would declare the highest applicable EAL on the initial ENF to meet the time limit.</p> </div> <p>Obtain the applicable Emergency Notification Form (ENF) from the <u>control room</u> and complete as follows:</p> <p><u>STANDARD:</u> Initial Site Area Emergency form # 4.6.S.1 is selected and candidate continues to Step 2.6.1.</p> <p><u>COMMENTS:</u></p>	<p>CRITICAL STEP</p> <p>___ SAT</p> <p>___ UNSAT</p>
8	2.6.1	<p><u>IF</u> pre-printed forms are <u>NOT</u> available , perform the following:</p> <p>A. Manually perform initial notification per RP/0/A/1000/015 A, enclosure for Guidelines for Manually Completing an Initial Message.</p> <p>B. GO TO Step 2.7.</p> <p><u>STANDARD:</u> Candidate determines pre-printed forms are available and this step does not apply.</p> <p>Continues to step 2.6.2</p> <p><u>COMMENTS:</u></p>	<p>___ SAT</p> <p>___ UNSAT</p>

9	2.6.2	<p>Ensure EAL # and description as determined by RP/0/A/1000/001 matches Line 4.</p> <p><u>STANDARD:</u> Candidate ensures EAL # on line 4 is 4.6.S.1 and EAL description is Hostile Action within the Protected Area. Current plant conditions DO NOT threaten public safety.</p> <p>Continues to step 2.6.3.</p> <p><u>COMMENTS:</u></p>	<p>___ SAT</p> <p>___ UNSAT</p>
10	2.6.3	<p>Enter message # - Beginning at one, message numbers will increment every message, regardless of whether it is an UPGRADE.</p> <p><u>STANDARD:</u> Candidate enters 1 as the message #.</p> <p>Continues to step 2.6.4.</p> <p><u>COMMENTS:</u></p>	<p>CRITICAL STEP</p> <p>___ SAT</p> <p>___ UNSAT</p>
11	2.6.4	<p>Line 1 - Mark appropriate box "Drill", "Actual Declaration" or "Termination"</p> <p><u>STANDARD:</u> Candidate marks Drill in line 1.</p> <p>Continues to step 2.6.5.</p> <p><u>COMMENTS:</u></p>	<p>___ SAT</p> <p>___ UNSAT</p>

12	2.6.5	<p>Line 4 - Time and date of declaration (Refer to time in Step 2.1)</p> <p><u>STANDARD:</u> Candidate enters today's date and declaration time from step 2.1.</p> <p>Continues to step 2.6.6.</p> <p><u>COMMENTS:</u></p>	<p>CRITICAL STEP</p> <p>___ SAT</p> <p>___ UNSAT</p>
----	-------	--	---

13 2.6.6

NOTE: • An EMERGENCY RELEASE is defined as an unplanned, quantifiable, airborne radiological release to the environment attributable to the emergency event.

• Some examples of conditions where airborne releases would be considered In-Progress are provided below. Not all bullets are required.

• This list is not intended to be all inclusive.

• **The SM should then evaluate whether the release in-progress is considered attributable to the emergency event. If a radiological release was occurring prior to the emergency event and the radioactive release rate did NOT change because of the emergency event, then a release is NOT In-Progress and ENF line 5 would be marked "None".**

Release Source	Potential Indications
SG Tube Leak	<ul style="list-style-type: none"> 1,2,3 RIA-40 in alarm or rising Steam pressure maintained or rising in an isolated SG Level maintained or rising in an isolated SG
Release from Unit Vent	<ul style="list-style-type: none"> 1,2,3 RIA-45 or 46 in alarm or rising Notified by RP of significant release to the unit vent
Release from Containment	<ul style="list-style-type: none"> Containment pressure greater than 1 psig Actual Containment breach is determined

Line 5 - Perform one of the following:

A. **IF** there is **NO** emergency release occurring as a result of the declared event as defined above and as determined by the Shift Manager, mark "NONE".

B. **IF** there is an ongoing emergency release in accordance with the definition above as determined by the Shift Manager, mark "IS OCCURRING".

C. **IF** an emergency release as defined above and as determined by the Shift Manager has occurred previously during the declared emergency and is no longer occurring, mark "HAS OCCURRED".

STANDARD: Candidate determines NO release is occurring and marks **NONE**.

Continues to step 2.6.7.

COMMENTS:

----	-------	---	---

TIME STOP: _____

CRITICAL STEP EXPLANATIONS

SEQ STEP #	Explanation
1	The candidate needs to be able to utilize the procedure and determine the conditions meet a Site Area Emergency classification. This is a time critical step. The candidate needs to declare the SAE within 15 minutes of beginning the JPM. (The start of the JPM is the beginning of the assessment period)
7	The correct form that matches the EAL # is selected.
10	The correct message number is input on the ENF.
12	Declaration time and date are input on the ENF.
13	None is marked on line 5 of the ENF to indicate no release in progress.
16	The candidate signs and enters time and date on line 13 of the ENF. This is a time critical step. The time entered must be within 15 minutes of the declaration time in step 1.

CANDIDATE CUE SHEET

(TO BE RETURNED TO EXAMINER UPON COMPLETION OF TASK)

INITIAL CONDITIONS

Time: 3 hours ago:

- The Oconee County Sheriff reported that a large group of “anti-nukes” had assembled at the Visitor Center

CURRENT CONDITIONS

- ALL three Unit's at 100% power
- Oconee County Sheriff reports that an explosion has occurred at the Keowee Hydro Dam, however the dam shows only minor damage with no breach
- Keowee personnel report no visible damage to the KHUs
- Security Shift Supervisor notifies the SM that security is responding to armed adversaries in the vicinity of the Unit 1 Main Transformer

INITIATING CUE

You are to perform the required actions of the Emergency Coordinator by referring to RP/0/A/1000/01, Emergency Classification:

1. Determine Emergency Classification at present time.
2. Complete appropriate Emergency Notification Form (ENF) for the current conditions.

Inform the examiner when you have made the classification.

THIS IS A TIME CRITICAL JPM

Note: Do not use Emergency Coordinator's judgment as the basis for classifying the event. When required, an operator will maintain the Emergency Coordinator's Log and assume the duties of the Control Room Offsite Communicator.
