MARCH 13 1987

L-87-112

U. S. Nuclear Regulatory Commission  
Attn: Document Control Desk  
Washington, D. C. 20555

Gentlemen:

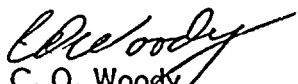

Re: St. Lucie Unit 2  
Docket No. 50-389  
Completion of Plant Modification  
to Station Air System

By letter L-84-266 dated September 28, 1984, Florida Power & Light Company (FPL) requested NRC approval for a change to the station air system which resulted in the replacement of certain containment isolation valves. By letter L-84-280, dated October 19, 1984, FPL proposed a license amendment to reflect this plant change in the St. Lucie Unit 2 Technical Specifications. By letter dated March 15, 1985 (D. E. Sells to J. W. Williams), the NRC issued Amendment No. 10 to the St. Lucie Unit 2 Operating License, No. NPF-16, which amended the Technical Specifications to reflect the impending implementation of the plant modification to ensure proper valve identification before and after the modification was completed. In the cover letter to that amendment, the NRC requested that FPL inform the staff upon the completion of the station air system modification and initiate action to revise the Technical Specifications to incorporate the new valve tag numbers and delete the associated footnotes.

This plant modification to the station air system has been implemented. FPL is currently preparing a License Amendment request to delete the previous valve numbers and replace them in the body of the Technical Specifications with current plant configuration.

If additional information is required on this topic, please contact us.

Very truly yours,

  
C. O. Woody  
Group Vice President  
Nuclear Energy
