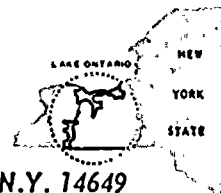

Figure 1 illustrates the experimental setup. A participant is seated at a table, viewing a screen. The screen displays a target (a small circle) and a starting point (a larger circle). A hand is positioned at the starting point, and a line indicates the movement path towards the target. The distance between the starting point and the target is labeled 'D'. The participant's eye is labeled 'E', and the hand is labeled 'H'. The screen is labeled 'S'.

Director of Nuclear Reactor Regulation  
ATTN: Mr. Dennis Ziemann, Chief  
Operating Reactors Branch #2  
U.S. Nuclear Regulatory Commission  
Washington, D.C. 20555

Subject: Three Mile Island Lessons Learned Short Term Requirements  
R.E. Ginna Nuclear Power Plant  
Docket No. 50-244

Dear Mr. Ziemann:

Harold Denton's letter dated October 30, 1979 provided clarifications of, and additions to, NRC staff requirements for short term lessons learned. We reviewed the requirements and in our letter of November 19, 1979 committed to meet the schedule and method of compliance requested or provided justification for any differences from the requirements.

This letter documents our completion of those items which were required by January 1, 1980. Additional information was previously provided to you in letters dated October 17 and November 19, 1979. This letter also provides additional information concerning design of items required by January 1, 1981. Some of these items require NRC staff approval prior to implementation. Dates have been provided by which time staff approval is required in order to maintain an already tight schedule.

Sincerely yours,

*L.D. White, Jr.*  
L.D. White, Jr.
