Subject: Steam Generator Mid-Cycle Inspection, Fall 1980  
R. E. Ginna Nuclear Power Plant, Unit No. 1  
Docket No. 50-244

Dear Mr. Crutchfield:

In our September 12, 1980 letter we informed you of our planned steam generator inspection program for the Fall 1980 outage. In addition to the inspections described in that letter, we are now planning to install several test sleeves in steam generator tubes during this outage. These test sleeves are part of an overall program to develop sleeving as an alternative repair technique for indications in the tube sheet crevice region. The test sleeves are scheduled for installation following completion of the eddy current examinations around November 14, 1980. A description of the sleeve development and test program will be provided for your information prior to that time.

Very truly yours,

L. D. White, Jr.
