b. Inspection No. 50-244/89-04

Dear Mr. Martin:

By letter dated April 28, 1989, the NRC provided RG&E with the results of Inspection No. 50-244/89-04. This letter included as Appendix A a Notice of Violation related to operability of the replacement PORV block valves. RG&E was requested to respond, within 30 days, and provide a written statement or explanation in reply to the Notice, including (1) the reasons for the violation, (2) corrective steps which have been taken and the results achieved, (3) corrective steps which will be taken to avoid further violations, and (4) the date the full compliance will be achieved. The Notice further states that, where good cause is shown, consideration will be given to extending the response time.

Pertinent information regarding additional documentation to demonstrate operability of the PORV block valves, as requested by the NRC inspector, was submitted on May 3, 1989. This was found to be acceptable, as stated in the NRC response dated May 18, 1989. Since key RG&E personnel are fully engaged in completing the current Spring 1989 Refueling Outage and its associated modification activities, and since the technical issues concerning the valves have been resolved, it is requested that an additional 45 days be allowed for our formal response to the Inspection Report and Notice of Violation.

Very truly yours,

Robert C. Meckedy
