Attachment B

The proposed Technical Specification change reflects changes in the RG&E management organization. A realignment of responsibilities in the Engineering organization has resulted in a change in title whereby the Engineering Department now reports to the Vice President, Engineering and Construction, and a position of Chief Engineer has been created. The position of Assistant Chief Engineer, Engineering and Construction, has been deleted at this time although it is anticipated that there may be further minor changes in the Engineering organization at this level and below in the future. In order to maintain independence of the Quality Assurance organization from the design, construction and other engineering functions, Quality Assurance now reports to the Vice President, Engineering and Construction, instead of the Assistant Chief Engineer.

The changes will not reduce management attention to the operation of Ginna, will not reduce the effectiveness of the Quality Assurance organization, and will not affect the health and safety of the public.

In promulgating its interim final rule to comply with Public Law 97-415, the Commission published as guidelines a series of examples of amendments that are not likely to involve significant hazards considerations. 48 Fed. Reg. 14864, 14870. The Commission's example (i) relates to purely administrative changes to the technical specifications. This change clearly comes within example (i).

The proposed change does not involve a significant increase in the probability or consequences of an accident previously evaluated; or create the possibility of a new or different kind of accident from any accident previously evaluated; or involve a significant reduction in a margin of safety.

Handwritten marks and scribbles in the top right corner.

Extremely faint and illegible text spanning the middle of the page, appearing as a series of horizontal lines of noise.
