ROCHESTER GAS AND ELECTRIC CORPORATION • 89 EAST AVENUE, ROCHESTER, N.Y. 14649

JOHN E. MAIER
Vice President

TELEPHONE
AREA CODE 716 546-2700

December 29, 1982

Director of Nuclear Reactor Regulation
Attention: Mr. Dennis M. Crutchfield, Chief
Operating Reactors Branch No. 5
U.S. Nuclear Regulatory Commission
Washington, D.C. 20555

Subject: NUREG-0737 Technical Specifications
(Generic Letter No. 82-16)
R. E. Ginna Nuclear Power Plant
Docket No. 50-244

Dear Mr. Crutchfield:

Darrel Eisenhut's letter dated September 20, 1982 requested that we review our Technical Specifications to determine if they are consistent with guidance provided in his letter. We have reviewed the letter and find that eleven of the thirteen items are either not applicable, have been previously included in Technical Specifications or are being reviewed under other specific topic submittals as follows.

Shift Technical Advisor requirements (item 1) have been included in our Technical Specifications beginning with Amendment 42 and are included in proposed changes to our organization chart submitted September 28, 1982. Auxiliary feedwater system requirements (items 3 and 4) are included in our Technical Specifications as specifically addressed in our letter dated June 6, 1981. Dedicated hydrogen penetrations (item 5) and B&W auxiliary feedwater system requirements (item 9) are not applicable to the R. E. Ginna plant. The containment setpoint pressure (item 6) was revised in license Amendment 47. Containment purge valve requirements (item 7) are being addressed separately as part of the overall containment purge review. A requirement for a radiation signal to close the containment purge valves (item 8) was included in the Technical Specifications in license Amendment 47. A thermal-mechanical report (item 11) was submitted as referenced in our January 19, 1982 letter. No technical specification changes resulting from this report have been identified. An anticipatory trip on turbine trip (item 13) was included in our Technical Specifications prior to the TMI event as given on Table 3.5-1.

ROCHESTER GAS AND ELECTRIC CORP.

SHEET NO. 2

DATE December 29, 1982

TO Mr. Dennis M. Crutchfield

The remaining two items, limit overtime (item 2) and reporting safety valve and relief valve failures and challenges (item 12) have been implemented but have not yet been included in our Technical Specifications. A proposed amendment to incorporate these items is being prepared and should be reviewed and completed within the next two months.

Very truly yours,

John E. Maier
