Operating Reactors Branch No. 5
U.S. Nuclear Regulatory Commission
Washington, D.C. 20555

Subject: Steam Generator Sleaving
R. E. Ginna Nuclear Power Plant
Docket No. 50-244

Dear Mr. Crutchfield:

In meetings with members of the NRC Staff held on May 12 and May 20, 1983, we described the steam generator inspection and repairs conducted during the current refueling outage. We described the basis for our determining that the steam generator tubes were locked into the support plates. We also described modifications which have been made to the sleaving process. Attachments 1 and 2 to this letter document the visual aids used in these meetings. The remaining attachments to this letter document the analyses and tests which have been performed related to the inspections and repairs and demonstrate the acceptability of the steam generators for continued operation. Attachment 4 is proprietary to Babcock and Wilcox. Therefore, pursuant to 10 CFR 2.790(b) we request that Attachment 4 be withheld from public disclosure. An affidavit supporting nondisclosure is enclosed with the attachment.

Very truly yours,

John E. Maier
