Subject: Rochester Gas and Electric Corporation
R.E. Ginna Nuclear Power Plant
Docket No. 50-244

Dear Mr. Johnson:

Enclosed is a resubmittal of an Application for Amendment to Operating License originally submitted on June 29, 1990. The purpose of this submittal remains to amend Appendix A of that license to reformat the Auxiliary Electrical Systems Technical Specifications and Action Statements for the offsite and onsite power sources available for the operation of plant auxiliaries. This submittal incorporates comments received from your Project Directorate during the review of the previous submittal. This submittal supersedes in its entirety the June 29, 1990 submittal.

It should be noted that this Technical Specification upgrade is a voluntary submittal on the part of RG&E. The present Section 3.7 is an NRC-approved document. Although RG&E has chosen to model this proposed Specification after the Standard Technical Specifications, it is not a verbatim translation of the Standard Technical Specifications. We have chosen to adopt those sections considered appropriate for Ginna Station.

RG&E voluntarily chose to upgrade the Offsite Power System to provide improved reliability and, as a consequence, improved plant safety. The upgraded configuration continues to comply with our existing Technical Specifications. Because RG&E is voluntarily proposing to revise the Technical Specifications, the principles of 10CFR50.109 should be considered by the NRC staff during the review of this proposed license amendment.

This proposed Amendment should be considered effective 30 days after RG&E receipt of NRC approval.

Very truly yours,

Robert C. Mecredy
