Subject: NUREG-0737 Supplement 1/Regulatory Guide 1.97
R.E. Ginna Nuclear Power Plant
Docket No. 50-244

Dear Mr. Johnson:

In RG&E's March 13, 1992 letter regarding NUREG-0737 Supplement 1/Regulatory Guide 1.97, item 73 of attachment 3, Table 1, we noted that six environmentally qualified Containment Air Temperature RTDs would be installed during the 1992 refueling outage. The installation of the RTDs has been completed; however, the actual environmental qualification testing, and the subsequent preparation of qualification documentation packages, are not yet complete.

We expect the testing to be completed during the summer of 1992, and review of test results and documentation into EQ packages to be completed by November 1, 1992.

These RTDs do not provide safety-related indications, and are not referenced in the Emergency Operating-Procedures. We expect the installed RTDs to operate in the event of a harsh environment, but will not consider this modification to be complete until all documentation is completed.

Very truly yours,

Robert C. Mecredy
