Subject: Changes to Technical Specification Instrumentation  
Requirements  
R.E. Ginna Nuclear Power Plant  
Docket No. 50-244

Dear Mr. Johnson:

By letter dated August 31, 1995, RG&E submitted a package of information justifying the applicability of WCAP-10271, its associated supplements, and other related changes to the Ginna Station Reactor Trip System and Engineered Safety Features Actuation System technical specification requirements.

The purpose of that submittal was to provide sufficient bases for the NRC to be able to generate a Safety Evaluation Report, confirming that WCAP-10271 is applicable to Ginna Station. A separate license amendment should not be issued since the resultant SER is to be blended into RG&E's full conversion to the Improved Standard Technical Specifications (NUREG-1431).

As stated in our August 31 letter, this review should be coordinated with the overall NRC review of our May 26, 1995, since it is an integral portion thereof.

Very truly yours,

Robert C. Mecredy
