Subject: Response to NRC Bulletin 96-02
R.E. Ginna Nuclear Power Plant
Docket No. 50-244

Reference: NRC Bulletin 96-02: Movement of Heavy Loads Over
Spent Fuel; Over Fuel in the Reactor Core, or Over
Safety-Related Equipment, dated April 11, 1996.

Dear Mr. Vissing:

RG&E has performed a review of our planned activities for the next two years related to heavy loads, as discussed in the subject NRC Bulletin. This review has shown that all potential heavy load movements are within the scope of the Ginna Station licensing basis and are covered by existing plant procedures and work controls, which were implemented primarily in response to NUREG-0612. The only activity that is planned which may involve heavy load movement different than previously analyzed is a spent fuel pool storage expansion. This activity is presently scheduled for late 1998, and is planned to be performed via a Licensee Amendment. Prior to that scheduled modification, an evaluation of all of the activities will be performed to determine if heavy load movements can be accomplished within the Ginna Station licensing basis. If not, this information will be included in the License Amendment Application.

Very Truly Yours,

Robert C. Mecredy
