• **Case 1:** A 45-year-old male with a long history of alcohol abuse and chronic liver disease. He presented with a 2-week history of abdominal pain, weight loss, and a 10-lb weight gain. Physical examination revealed a distended abdomen with a fluid wave and a positive shifting dullness sign. Laboratory tests showed a total bilirubin of 2.5 mg/dL, aspartate aminotransferase (AST) of 150 U/L, and albumin of 2.8 g/dL. A paracentesis was performed, and the fluid was found to be transudative with a protein of 1.2 g/dL and a lactate dehydrogenase (LDH) of 100 U/L. The patient was treated with diuretics and his symptoms improved.
