Figure 1. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains. The *Agrobacterium* strains were grown in the YEA medium for 24 h at 28 °C. The cell concentration of the strains was adjusted to 10⁸ cells/ml. The cell suspension was mixed with the plant tissue and incubated for 24 h at 28 °C. The plant tissue was then cultured on the selective medium. The transformation efficiency was determined as the number of transformants per 100 mg of plant tissue. The data are the mean ± SD of three independent experiments.

Figure 1: Schematic representation of the experimental design. The figure is divided into two main sections: 'Pretest' and 'Main Experiment'. The 'Pretest' section shows a participant (P) interacting with a screen (S) to learn the location of a target (T) in a 2D space. The 'Main Experiment' section shows a participant (P) interacting with a screen (S) to learn the location of a target (T) in a 3D space, with a 3D coordinate system (x, y, z) shown.

Director of Nuclear Reactor Regulation
Attention: Mr. A. Schwencer, Chief
Licensing Branch No. 2
Division of Licensing
U.S. Nuclear Regulatory Commission
Washington, D.C. 20555

Dear Mr. Schwencer:

Subject: ANNUAL REPORT OF INSURANCE LEVELS

Pursuant to the requirement of 10CFR50.54(w)(4), I hereby report that the Supply System has the following insurance coverages on WNP-2.

PROPERTY: \$585,000,000 property insurance on our nuclear station. This policy is with American Nuclear Insurers/MRA.

\$250,000 deductible

LIABILITY: \$160,000,000 Primary Financial Protection, with American Nuclear Insurers/MAELU. We also have the maximum available Secondary Financial Protection.

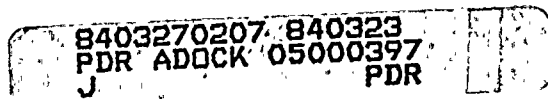

It is my understanding that Mr. Jerome Saltzman of the NRC, has a copy of each of these policies. If you find that you are lacking copies or have any other questions, please do hesitate to call me.

Very truly yours,

Carl Van Hoff for GCS

G. C. Sorensen, Manager
Regulatory Programs

GCS/kd
