Docket No. 50-397

Director of Nuclear Reactor Regulation
Attention: Mr. A. Schwencer, Chief
Licensing Branch No. 2
Division of Licensing
U.S. Nuclear Regulatory Commission
Washington, D.C. 20555

Dear Mr. Schwencer:

Subject: NUCLEAR PLANT NO. 2
AMENDMENT NO. 3 TO OPERATING LICENSE NPF-21,
CLARIFICATION OF PLANNED SURVEILLANCE

In the subject Amendment No. 3 to the Supply System's Operating License NPF-21, permission was granted by the NRC to suspend the provisions of Technical Specification 3.6.6.2 (Drywell and Suppression Chamber Oxygen Concentration) during the performance of the Startup Test Program until either the required 100% of RATED THERMAL POWER trip tests have been completed or the reactor has operated for 120 Effective Full Power Days (EFPD's). As discussed with the Staff, in order to be consistent with other similar recent licensing actions, we wish to provide the following clarification concerning our planned surveillance actions with regard to ensuring that the 120 EFPD's is not exceeded.

Beginning the week of September 3, 1984, and at least once every seven (7) calendar day period during the remainder of the Power Ascension Test Program (PATP), the Supply System shall calculate and record the cumulative EFPD to verify that it is less than 120 (at the time of this writing, it is less than 20).

The EFPD shall be calculated by determining the present core exposure ($\frac{\text{MWD}}{\text{ST}}$) distribution as compiled in the GE-supplied Process Computer, and dividing this by the ratio of the plant rated thermal power (3323 MW) to the actual number of standard tons (ST) of uranium contained in the core. For instance, four days at 25 percent power would be equivalent to one EFPD. The resulting documentation shall be retained as a permanent plant record and shall be handled in accordance with the appropriate Plant Administrative Procedures.

1. The first part of the report is a general introduction to the subject of the study. It discusses the importance of the study and the objectives of the research. It also provides a brief overview of the methodology used in the study.

2. The second part of the report is a detailed description of the study area. It provides information about the location of the study area, the population of the area, and the characteristics of the area.

3. The third part of the report is a description of the data collection process. It discusses the methods used to collect data, the sources of data, and the procedures used to ensure the accuracy of the data.

4. The fourth part of the report is a description of the data analysis process. It discusses the methods used to analyze the data, the results of the analysis, and the conclusions drawn from the analysis.

5. The fifth part of the report is a conclusion and recommendations section. It summarizes the findings of the study and provides recommendations for future research.

6. The sixth part of the report is a list of references. It includes a list of all the sources of information used in the study.

7. The seventh part of the report is an appendix. It contains additional information that is not included in the main body of the report.

8. The eighth part of the report is a glossary. It defines the terms used in the report.

9. The ninth part of the report is a list of figures and tables. It provides a list of all the figures and tables included in the report.

10. The tenth part of the report is a list of abbreviations. It provides a list of all the abbreviations used in the report.

11. The eleventh part of the report is a list of symbols. It provides a list of all the symbols used in the report.

12. The twelfth part of the report is a list of footnotes. It provides a list of all the footnotes included in the report.

13. The thirteenth part of the report is a list of appendices. It provides a list of all the appendices included in the report.

14. The fourteenth part of the report is a list of references. It provides a list of all the references included in the report.

A. Schwencer
