5) Letter, G02-85-152, G. C. Sorensen (SS) to A. Schwencer (NRC), "Reg. Guide 1.97 Equipment", dated March 21, 1985

The subject license condition requires the Supply System to implement (installation or upgrade) the requirements of Regulatory Guide 1.97, Rev. 2, with the exception of flux monitoring, prior to startup following the first refueling outage.

In Reference 5 the Supply System provided a preliminary list of the equipment that the license condition applied to. The reference letters requested that the implementation date for the subject license condition be deferred to prior to startup following the second refueling outage for certain specific items; namely, the suppression pool wide range level instrumentation, and six (6) PSR valves in the PASS system. The request to defer the PSR valves was ultimately withdrawn on the basis of the reasons cited in Reference 4.

SATISFACTION OF LICENSE CONDITION 2.C.(16), ATTACHMENT 2, ITEM 3(a)

The request to defer the implementation schedule for the suppression pool wide range level monitoring system has been approved (Amend. No. 25).

With the exception of the suppression pool wide range level monitoring system, the Supply System has completed the installation or upgrade of all identified equipment required to meet the recommendations of Regulatory Guide 1.97, Rev. 2, and with issuance of the license amendment addressing the exception identified above, has satisfied License Condition 2.C.(16), Attachment 2, Item 3(a).

Should you have any questions, please contact Mr. P. L. Powell, Manager, WNP-2 Licensing.

Very truly yours,

for 

G. C. Sorensen, Manager
