WASHINGTON PUBLIC POWER SUPPLY SYSTEM

P.O. Box 968 • 3000 George Washington Way • Richland, Washington 99352

May 11, 1990
G02-90-093

Docket No. 50-397

Mr. J. B. Martin, Regional Administrator
U.S. Nuclear Regulatory Commission
Region V
1450 Maria Lane, Suite 210
Washington, D.C. 20555

Dear Mr. Martin:

Subject: NUCLEAR PLANT NO. 2, OPERATING LICENSE NPF-21
WNP-2 EQUIPMENT SETPOINT METHODOLOGY
PROGRAM PLAN (TAC NO. 55579)

- Reference: 1) Letter, G02-90-062, GC Sorensen (SS) to NRC,
same subject, dated March 29, 1990
- 2) Letter, RB Samworth (NRC) to GC Sorensen (SS),
"Setpoint Methodology for GE Supplied Protection
System Instrumentation (TAC No. 55579)",
dated November 3, 1988

In Reference 1 the Supply System provided a revised schedule for completing both the harsh environment accuracy effects as well as the overall equipment setpoint methodology program plan. In the attachment to that letter, item 4.2 estimated a task completion date of May 11, 1990 for providing the WNP-2 methodology used to implement the margin reevaluation program for that equipment required to operate during the course of an accident to the Staff for review. This commitment is hereby satisfied by submittal of the attached Supply System Engineering Standard No. EES-4, Rev. 0, entitled "Setpoint Methodology", specifically sections 8.3, 8.5, 8.7, 8.9 and 10.1. The attached setpoint methodology is being refined as technology advances and we do not plan to submit future revisions.

In the interest of consistency, the Supply System has already begun to implement this program. Should the Staff have any questions or concerns, please advise us at your earliest convenience.

Very truly yours,

Alan Haskins

G. C. Sorensen, Manager
Regulatory Programs
