August 20, 1990  
G02-90-137

Docket No. 50-397

U.S. Nuclear Regulatory Commission  
Attn: Document Control Desk  
Washington, D.C. 20555

Gentlemen:

Subject: NUCLEAR PLANT NO. 2, OPERATING LICENSE NPF-21  
WITHDRAWAL OF REQUEST FOR AMENDMENT TO TECHNICAL  
SPECIFICATION 3.8.1.1, AC SOURCES REDUCING  
EXCESSIVE TESTING OF DIESEL GENERATORS

Reference: Letter, G02-90-037, GC Sorensen (SS) to NRC, same subject,  
dated March 2, 1990

The reference requested changes to the WNP-2 Diesel Generator Technical Specifications to reduce excessive testing of the Diesel Generators and thereby extend reliability. The genesis of these changes is from Generic Letter 84-15, "Proposed Staff Action to Improve and Maintain Diesel Generator Reliability", recent changes approved on other dockets and newly recognized provisions of this specification being approved and implemented in the Technical Specification Improvement Program.

If modifications to the Technical Specification change request recently suggested by the NRC staff were to be adopted, it is apparent to the Supply System that a reduction in diesel generator testing requirements would not result from the Technical Specification change.

The Supply System therefore withdraws the reference change request.

Very truly yours,

G. C. Sorensen, Manager  
Regulatory Programs
