Docket No. 50-397

U.S. Nuclear Regulatory Commission  
Attn: Document Control Desk  
Washington, D.C. 20555

Gentlemen:

Subject: NUCLEAR PLANT NO. 2, OPERATING LICENSE NPF-21  
RESPONSE TO GENERIC LETTER 89-10, SUPPLEMENT 3,  
"CONSIDERATION OF THE RESULTS OF NRC-SPONSORED  
TESTS OF MOTOR-OPERATED VALVES" (TAC NOs. 75738  
AND 77801)

Generic Letter 89-10, Supplement 3 requires that BWR licensees provide a written response to Reporting Requirement number one within 30 days of their receipt of the letter. The Supply System received the subject letter November 12, 1990. The purpose of this letter is to provide such response.

The Supply System has completed a plant specific safety assessment which addresses the factors described in Generic Letter 89-10, Supplement 3. The safety assessment is available on site for Staff review.

The subject Generic Letter also requested that BWR licensees notify the NRC staff whether they believe that there are MOVs with deficiencies of greater safety significance than the MOVs used to provide containment isolation in the steam supply lines of the HPCI and RCIC systems, in the supply line of the RWCU system, and in the line to the isolation condenser.

In light of the limited data from the INEL testing, at this time, no MOVs have been identified for WNP-2 with greater safety significance than those previously identified in IE Bulletin 85-03.

This completes the Supply System's response to Generic Letter 89-10, Supplement 3.

Very truly yours,

  
G. C. Sorensen, Manager  
Regulatory Programs
