Docket No. 50-397
August 26, 1993

U.S. Nuclear Regulatory Commission
Attn: Document Control Desk
Washington, D.C. 20555

Gentlemen:

Subject: WNP-2, OPERATING LICENSE NPF-21
 INSERVICE INSPECTION PROGRAM PLAN REVISION, ASME
 SECTION XI, 1989 EDITION, CATEGORY B-M-2, VALVE BODY
 EXAMINATION

The Supply System requests the Commission's approval, per 10CFR50.55a(g)(4)(iv), to update to the ASME Section XI, 1989 Edition for Code Category B-M-2, item B12.40, valve body internal examinations. The Commission approved use of the 1989 Edition in the August 6, 1992 10CFR50.55a. The updated Section XI requirements, if approved, will be implemented at refueling outage R-9, commencing in April, 1994. All related requirements from the 1989 Edition for the examination of Category B-M-2 will also be implemented. These will include:

- 1) IWA-2213 for VT-3 examination requirements,
- 2) Table IWB-2500-1, item B12.40, notes 2 and 3,
- 3) IWB-3519 for acceptance criteria.

The Supply System has completed examination of at least one valve in 10 of the 14 groups of valves as defined in Table IWB-2500-1, Category B-M-2, item B12.40 of the 1980 Edition, Winter 1980 Addenda of Section XI. Twenty-seven (27) of the 75 item B12.40 valves in Category B-M-2 have been examined. These examinations were performed while the valves were disassembled for maintenance. The Supply System has four groups of valves (total of 13

INSERVICE INSPECTION PROGRAM PLAN REVISION

valves) left where at least one valve has not been examined during the first inspection interval. These valves are not scheduled to be disassembled for maintenance at R-9. Four of 13 valves will need to be disassembled at R-9 to perform an internal visual examination under the current Section XI requirements. Attachment 1 lists the valve groups and their examination date.

Regrouping the valves per Table IWB-2500-1 (1989 Edition) will result in 24 groups of which 12 have had at least one valve examined during this inspection interval (see Attachment 2). The regrouping is shown in Attachment 2. The difference in the number of groups is the additional requirement in the 1989 Edition of grouping by size. The use of 1989 Edition will not require valves to be disassembled just for visual inspection, but will require a greater number of valves to be examined (24 versus 14) when the valves are disassembled for maintenance. The 1989 Edition or later Commission approved addenda will be required for WNP-2's second inservice inspection interval.

A response to this request would be appreciated prior to December 31, 1993, to support R-9 refueling outage planning.

Sincerely,

J. V. Parrish (Mail Drop 1023)

Assistant Managing Director, Operations
