Arizona Public Service Company

Director of Nuclear Reactor Regulation
Mr. George W. Knighton, Chief
Licensing Branch No. 3
Division of Licensing
U.S. Nuclear Regulatory Commission
Washington, D.C. 20555

October 17, 1984
ANPP-30885 TFQ/DKN

Subject: Palo Verde Nuclear Generating Station (PVNGS)
Units 1, 2, and 3
Gaseous Effluents Monitoring
Docket Nos. STN 50-528/529/530
File: 84-056-026; G.1.01.10

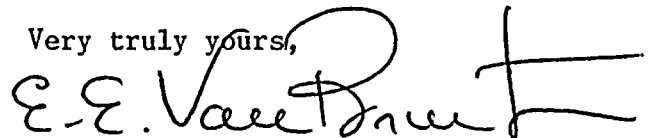

- Reference: (1) Letter from G. W. Knighton, NRC, to E. E. Van Brunt, Jr., APS, dated January 16, 1984; Subject: Monitoring of Gaseous Effluents for Palo Verde.
- (2) Letter from E. E. Van Brunt, Jr., APS, to G. W. Knighton, NRC, dated June 14, 1984 (ANPP-29750); Subject: Monitoring of Gaseous Effluents for Palo Verde.

Dear Mr. Knighton:

Reference (1) requested the Arizona Public Service Company (APS) to document the method for determining gaseous effluent flow rates via the fuel building, condenser evacuation system, and the plant vent. APS provided this information as well as an implementation schedule in Reference (2). This letter provides clarification for the implementation schedule that was provided in the Reference (2) letter. The flow sensor for the condenser vacuum pump/gland seal exhaust will be installed by December 31, 1984. The flow sensor for the fuel building exhaust will be installed by March 31, 1985. Additionally, there will be no change to the previous implementation schedule for the plant vent flow sensor which will be installed prior to fuel load.

If you have any questions concerning this matter, please contact me.

Very truly yours,

E. E. Van Brunt, Jr.
APS Vice President
Nuclear Production
ANPP Project Director

1. The first group of authors (e.g., [1, 2]) considers the problem of the stability of the motion of a system of particles in the field of a central body. The results of these studies are used in the theory of the motion of celestial bodies.
