Dear Mr. Knighton:

A change to the design of the main pressurizer spray line that deleted the internals from check valve RC-V-244 was identified in Reference (2). To demonstrate adequate depressurization capability of the Auxiliary Pressurizer Spray System (APSS), due to the change, the Natural Circulation test procedure (References (2) and (3)) has been modified to incorporate testing with the main spray valves in the full open position.

The modification of the Natural Circulation Test from 80% Power is complete. Attached, as stated in Reference (1), is the revised Natural Circulation procedure which is submitted for your staff's review.

If you have any questions, please contact Mr. William Quinn of my staff.

Very truly yours,

EE Van Brunt
