Docket No. STN 50-529

161-00750-EEVB/BJA

January 18, 1988

U. S. Nuclear Regulatory Commission
Washington, D. C. 20555

Attention: Document Control Desk

Dear Sirs:

Subject: Palo Verde Nuclear Generating Station (PVNGS)
Unit 2
Withdrawal of Technical Specification
Change Request
File: 88-F-056-026

Reference: (1) Letter from E. E. Van Brunt, Jr., ANPP, to USNRC Document Control
Desk dated January 14, 1988 (161-00743). Subject: One Time
Exception to Surveillance Requirement for Valve RCB-HV-105

ANPP requested a one-time only exception to Surveillance Requirement 4.4.10 for Reactor Coolant System (RCS) vent valve RCB-HV-105. This change request was transmitted to the NRC by Reference (1). The proposed change would have allowed ANPP to credit a surveillance test on valve RCB-HV-105 that was performed while the unit was in Mode 3 conditions instead of the Technical Specification required Modes 5 or 6. Per telephone conversation with the NRC Staff on January 15, 1988, the NRC informed ANPP that the requested Technical Specification change was not required. The NRC further stated that a Justification for Continued Operation (JCO) must be prepared which would state why it is safe to continue operations until the first refueling outage. ANPP has prepared the JCO and a copy of it is available for inspection at ANPP. Additionally, ANPP requests that the previously submitted Technical Specification change (Reference (1)) be withdrawn as it is no longer required.

If you have any additional questions on this matter, please contact Mr. A.C. Rogers of my staff.

Very truly yours,

E. E. Van Brunt, Jr.
Executive Vice President
Project Director
