REGULATORY DOCKET FILE COPY

Dear Mr. Denton:

This letter serves to request an extension in responding to Mr. A. Schwencer's letter of August 28, 1978 concerning the Overpressure Protection Technical Specifications. Our review of the proposed Technical Specifications in Mr. Schwencer's letter indicated that certain information is required from sources outside of AEPSC. We do not anticipate receipt of this information in time to respond in the requested 45 days. In addition, several in-house reviews must be conducted before submittal of these Technical Specifications. We are requesting an extension of approximately five (5) weeks, to November 28, 1978, for submittal of proposed Technical Specifications for the Overpressurization Mitigating System.

We would like to point out that administrative controls and operating procedures are in place and cover the concerns associated with the Overpressurization Mitigating System. These procedures were described in our letter on this matter to Mr. Bernard Rusche, dated March 3, 1977.

Docket No. 50-316

-Dear Mr. Tillinghast:

Thank you for your letter dated September 29, 1978, responding to our letter dated August 16, 1978. While your response did not specifically address the Unit 2 diesel generator related problems in the format specified in the Notice of Violation, we have judged the corrective actions described in your letter to sufficiently cover our concerns. Consequently, we have no further questions at this time. Personnel from our Region III Office will examine your implementation of the corrective action during future inspections.

Distribution.
