CONTROL ROOM HABITABILITY ANALYSIS

U. S. Nuclear Regulatory Commission
Attn: Document Control Desk
Washington, D.C. 20555

Attn: T. E. Murley

June 17, 1988

Dear Dr. Murley:

In our letter AEP:NRC:0398N, dated October 2, 1987, we committed to reanalyze control room habitability under conditions of radiological and toxic gas releases. As noted in the letter, we had anticipated completion of the analyses by June 30, 1988. The reanalyses were recommended by the NRC based on a review of the Cook Nuclear Plant control room ventilation systems conducted in September 1986 by a survey team from NRR and the Argonne National Laboratory. The analyses are currently in progress. However, our estimated completion date has changed to September 30, 1988. The additional time is necessary to complete independent verification of the analyses as required by our quality assurance procedures and to develop more detailed modeling of the effects of toxic gas on control room habitability.

This document has been prepared following Corporate procedures which incorporate a reasonable set of controls to ensure its accuracy and completeness prior to signature by the undersigned.

Sincerely,

M. P. Alexich
Vice President
