MONTHLY OPERATING ACTIVITIES - DECEMBER 1987

HIGHLIGHTS:

The reporting period began with the unit in Mode 1 at 90% of rated thermal power. The unit remained at 90% power until 1730 on 12-24-87, at which time a power reduction to 56% was initiated for cleaning of the East and West Feed Pump Turbine Condensers. The unit reached 56% power at 0240 on 12-25-87. A power increase to 90% was started at 2138 on 12-27-87 and terminated at 0509 on 12-28-87 when the unit reached 90% rated thermal power.

The reporting period ended with the unit at 90% of rated thermal power.

Gross electrical generation was 683,500 MWH for the month.

SUMMARY

12-29-87	1053	Containment integrity at containment penetration No. 67 was broken for performance of a surveillance test procedure. The limiting condition of operations for Technical Specification 3.6.1.1 was entered.
		At 1106 the same day containment integrity was re-established.
12-31-87	0253	Technical Specification 3.0.3 was voluntarily entered to cycle a motor operated valve for normal surveillance testing.
	0305	Pressurizer relief valve block valve was declared inoperable because the valve closure time could not be determined. The valve was closed, and the power supply isolated to satisfy the requirements of Technical Specification 3.4.1.1.

MAJOR SAFETY-RELATED MAINTENANCE

DECEMBER, 1987

M-1

1-DCR-310 (Steam Generator 3 Blowdown Containment Isolation Valve) had a body-bonnet leak. The valve was disassembled, inspected, and reassembled with new intervals. The valve tested satisfactorily.

10

[illegible]

Figure 1. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains. The *Agrobacterium* strains were grown in the medium containing 100 mg/l of tetracycline. The cell concentration of the *Agrobacterium* strains was adjusted to 100 mg/ml of the cell suspension. The cell suspension was then diluted with distilled water to the desired concentration. The cell suspension was then inoculated into the plant tissue. The plant tissue was then cultured in the medium containing 100 mg/l of tetracycline. The transformation efficiency was determined by the number of transformants per 100 mg of plant tissue. The data are presented as the mean \pm SD of three independent experiments.

January 8, 1988

Gentlemen:

Pursuant to the requirements of Donald C. Cook Nuclear Plant Unit 1
Technical Specification 6.9.1.10, the attached Monthly Operating
Report for the Month of December, 1987 is submitted.

Sincerely,

W. G. Smith, Jr.
W. G. Smith, Jr.
