Attn: W. T. Russell

June 13, 1994

Dear Mr. Russell:

Amendment 178 to our Unit 1 technical specifications, issued March 15, 1994, approved use of a 2.0 volt steam generator tube support plate interim plugging criterion for Cycle 14. The safety evaluation report that accompanied the amendment required that we perform an assessment of the effectiveness of the methodology described in WCAP-13187 Rev. 0 for predicting the end-of-cycle voltage distribution. The attachment to this letter contains this evaluation.

Sincerely,

E. E. Fitzpatrick  
Vice President
