Director of Nuclear Reactor Regulation
Attention: Mr. Victor Stello, Director
Division of Operating Reactors
U. S. Nuclear Regulatory Commission
Washington, D. C. 20555

Dear Mr. Stello:

Re: Turkey Point Units 3 and 4
Docket Nos. 50-250 and 50-251
Asymmetric LOCA Loads

On May 9, 1978, Florida Power & Light Company (FPL) responded to your letter of January 25, 1978 in which you requested a detailed schedule for providing an evaluation of the effects of asymmetric loss of coolant accident loads (as described in Enclosure 2 of your letter). In our letter we stated that FPL was a member of a utility task group which, with the assistance of Westinghouse Electric Corporation, had outlined the steps necessary to complete an evaluation of the type requested. At that time we had not fully reviewed and approved the entire program and stated that upon approval we would notify the Commission and provide a summary of the scope and schedule.

FPL has approved the utility task group program and is now an active participant in all of its phases. Our understanding of the current schedule status for this program is presented below:

<u>Program Effort</u>	<u>Completion Date</u>
Phase A	Complete
Phase B Generic Group Analyses	Complete
Phase B RCL Hydraulic Forcing Functions	Complete
Phase B Subcompartment Pressurization	November 1, 1978
Phase B Specific Plant Analyses	Early 1979
Phase C Generic Group Analyses	First Quarter 1979
MULTIFLEX Modifications	January 1, 1979
Reactor Cavity Pressurization Studies	January 1, 1979
Mechanistic Pipe Break Analysis	January 1, 1979
Phase C Specific Plant Analyses as required	January 1, 1980

Very truly yours,

Robert E. Uhrig
Vice President
