EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)

While performing weekly surveillance DIS 700-3 (Source Range Monitor Calibration) on two separate occasions, SRM #21 supplied required Rod Block Trip at 1.03E5 exceeding Tech Spec limit of $\leq 1.0E5$ CPS. Safety implications minimal because remaining SRM channels were operable and would have provided required Rod Block. Event has occurred before on Dresden 3 (RO #79-15-03L-0).

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27)

The output of the SRM #21 low level DC amplifier was found to drift and demonstrated a temperature dependency. The exact component involved has not yet been localized. A supplemental report will be submitted when the cause is identified. The SRM's are checked weekly.
