This memo confirms our notification of the subject prompt notification report's occurrence made Wednesday, May 7, 1960, to Mr. Elrod, of your office as follows:

# OCURRENCE

On Wednesday, May 7, 1920, in the course of performing planned maintenance scheduled as a result of a problem initially detected on Unit 3 (see LCR 250-79-31), the disc stem was discovered missing from the 4A main steam check valve. The disc and disc stud were in the proper position and the valve was fully operable as found although the disc stem sustained some wear damage from the loose flat washer which had remained in place.

### CORRECTIVE ACTION

Repairs and replacement of the nut using an improved locking device will be completed prior to starting up from cold shutdown. Additionally, the scheduled inspection and locking device upgrade will be completed on the remaining main steam check and isolation valves during this outage as planned and any significant findings reported in this LIR.
