1. The first part of the document discusses the importance of maintaining accurate records of all transactions and activities related to the project. It emphasizes the need for transparency and accountability in financial management.

2. The second part outlines the specific steps and procedures for conducting regular audits and reviews. This includes identifying key areas for inspection, selecting qualified personnel, and establishing clear timelines and objectives.

3. The third part addresses the challenges commonly encountered during the audit process, such as resistance from staff or limited access to information. It provides strategies to overcome these obstacles and ensure the integrity of the findings.

4. Finally, the document concludes by highlighting the long-term benefits of a robust internal control system. By implementing effective auditing practices, organizations can enhance their operational efficiency, reduce risks, and build trust among stakeholders.

Office of Nuclear Reactor Regulation
Attention: Mr. Darrell G. Eisenhut, Director
Division of Licensing
U.S. Nuclear Regulatory Commission
Washington, D.C. 20555

Dear Mr. Eisenhut:

Re: Turkey Point Unit 4
Docket No. 50-251
Post-TMI Requirements
Containment Pressure Monitors

As was discussed with Marshall Grotenhuis of your staff on February 16, 1982, the following is intended to update the status of NUREG-0737 item II.F.1(4) which we previously addressed in our letter L-82-5 dated January 7, 1982.

In our NUREG 0737 status update letter of January 7, 1982, we had indicated that the wide range portion of the containment pressure monitors had been installed in Turkey Point Unit 4. Following the discovery and confirmation that portions of the system had not been installed, the resident NRC inspector was informed on February 13, 1982. The wide range portions of the containment pressure monitors have now been installed and are operational at Turkey Point Unit 4. As we stated in our January 7, 1982 letter, the delivery of the vacuum portion of the system is currently scheduled for May 22, 1982. The installation of the transmitters is not outage related and will be done promptly following receipt of the equipment. We will inform you of any unforeseen changes in this schedule.

Very truly yours,

Robert E. Uhrig
Vice President
Advanced Systems and Technology
