1. The first part of the report is a general statement of the purpose of the study. This is followed by a brief review of the literature on the subject. The third part of the report is a description of the methods used in the study. This is followed by a presentation of the results of the study. The final part of the report is a discussion of the results and their implications.

The purpose of this study was to determine the effect of the independent variable on the dependent variable. The results of the study showed that there was a significant difference between the two groups.

The results of the study showed that there was a significant difference between the two groups. This suggests that the independent variable has a significant effect on the dependent variable.

L-82-167

Office of Nuclear Reactor Regulation
Attention: Mr. Darrell G. Eisenhut, Director
Division of Licensing
U. S. Nuclear Regulatory Commission
Washington, D. C. 20555

Dear Mr. Eisenhut:

Re: Turkey Point Units 3 & 4
Docket Nos. 50-250 and 50-251
Proposed License Amendment
Hot Channel Factor Normalized Operating Envelope

The following additional information is provided to supplement L-82-166 of April 21, 1982:

Based on investigation of Figure 3.2-3 of the Turkey Point 3 and 4 Technical Specifications, it has been determined that the currently docketed figure is incorrect. Based on Westinghouse investigations it appears that the intercept of the second and third line segments in the region of 11 feet in core height has been incorrectly calculated for an FQ(Z) of 2.125. The current intercept coordinates of 11.2 feet, 0.849 reflect an incorrect calculation based on the use of FQ value of 2.125. Westinghouse has determined that the correct coordinates for the intercept should be 11.0 feet, 0.937. It is respectfully requested that Figure 3.2-3 be modified to reflect the following break points:

0 feet	1.0
6.0 feet	1.0
11.0 feet	0.937
12.0 feet	0.471

Very truly yours,

Robert E. Uhrig
Vice President
Advanced Systems and Technology

REU/DAC/ga
