Office of Nuclear Reactor Regulation
Attention: Mr. Darrell G. Eisenhut, Director
Division of Licensing
U. S. Nuclear Regulatory Commission
Washington, D.C. 20555

Dear Mr. Eisenhut:

Re: St. Lucie Unit I, Turkey Point Units 3 & 4
Docket No. 50-335, 50-250 & 50-251
Generic Letter 82-22, Congressional Request
For Information Concerning Steam Generator
Tube Integrity

Generic Letter 82-22 transmitted a questionnaire regarding steam generator tube integrity and contained a request for our plans concerning this matter. This information request was in response to a similar request made to the NRC by Representative Edward J. Markey, Chairman of the Subcommittee on Oversight and Investigations.

As you are aware, Representative Markey has toured our Turkey Point units on November 27, 1982 to inspect the progress of the Steam Generator Repair Project. During that visit Representative Markey was given the opportunity to ask questions of the people directly involved in this work (and the specific inquiries covered by the Questionnaire) or otherwise obtain the requested information.

In addition, the majority of financial information requested has already been submitted to various public agencies, including the NRC, and is available for review at any time. FPL reports the radiation exposure received by personnel working on our sites on a yearly basis. The reports we submit to NRC do not specifically show the exposure received due specifically to steam generator work. However, our periodic reports issued in conjunction with the Steam Generator Repair Project do in fact show the exposure received in various tasks performed in replacing the steam generators. In view of the fact the progress reports already submitted to the NRC contains much of the information requested, we do not plan on submitting any further information, or completing the questionnaire at this time.

Very truly yours,

J. A. De Mastry
