FLORIDA POWER & LIGHT COMPANY

April 8, 1983
L-83-223

Office of Nuclear Reactor Regulation
Attention: Mr. Darrell G. Eisenhut, Director
Division of Licensing
U.S. Nuclear Regulatory Commission
Washington, D. C. 20555

Dear Mr. Eisenhut:

Re: Turkey Point Unit 4
Docket No. 50-251
Technical Specification Exemption
during Steam Generator Repair Outage

Our letter L-82-497, dated November 10, 1982, identified various surveillance requirements required by our Technical Specifications which we did not intend to implement during the Steam Generator Repair Outage. This was due to the fact that fuel was removed from the reactor vessel during the length of the outage. We inadvertently left out a commitment to test all the affected equipment prior to reloading fuel into the reactor.

The purpose of this letter is to state our commitment to test the affected equipment and to perform the surveillances required by Technical Specifications referenced in L-82-497 prior to reloading fuel into the reactor and to resume normal surveillance frequencies at that time.

Very truly yours,

Robert E. Uhrig
Vice President
Advanced Systems & Technology

REU/JEM/js

cc: Mr. James P. O'Reilly, Region II
Mr. Harold F. Reis, Esquire
