Office of Nuclear Reactor Regulation  
Attention: Mr. Hugh L. Thompson, Jr., Director  
Division of PWR Licensing - A  
U. S. Nuclear Regulatory Commission  
Washington, D. C. 20555

Dear Mr. Thompson:

Re: Turkey Point Units 3 and 4  
Docket Nos. 50-250 and 50-251  
Reactor Vessel Material Surveillance Program

10 CFR 50, Appendix H, Section III requires that reactor vessel material surveillance specimen capsule fracture toughness test results be included in a summary technical report and submitted to the Director, Office of Nuclear Regulation, within one year of capsule withdrawal, unless an extension is granted by the Director.

The "V" surveillance capsule from Turkey Point Unit 3 was removed from the reactor vessel in late April 1985. Capsule analysis and testing was contracted to Southwest Research Inc. (SWRI) of San Antonio, Texas.

The project has been delayed because of the death of the SWRI Project Manager. Based on discussion with SWRI, Florida Power & Light Company will receive the SWRI report by the end of June. In order to provide sufficient time for review and resolution of comments, FPL requests an extension of the submittal date to September 1, 1986.

If you have any questions, please call us.

Very truly yours,

*C. O. Woody*

1. The first part of the report is a general introduction to the subject of the study. It discusses the importance of the study and the objectives of the research.

2. The second part of the report is a detailed description of the methodology used in the study. It includes information about the sample, the data collection methods, and the statistical analysis.

3. The third part of the report is a discussion of the results of the study. It compares the findings with the previous research and discusses the implications of the study.
