Gentlemen:

Re: Turkey Point Units 3 and 4  
Docket Nos. 50-250 and 50-251  
Annual Reports for 1992

In accordance with 10 CFR 20.407 (a) (2), Attachment 1 provides the recorded annual whole body exposure data for calendar year 1992 for Turkey Point Units 3 and 4. Attachment 2 is a tabulation of the occupational exposure data as required by Technical Specification 6.9.1.2.a. Total accumulated dose by Direct Reading Dosimeter (DRD), (Attachment 2), was approximately 316 person-rem. Total whole body exposure by Thermoluminescent Dosimeter (TLD) was approximately 325 person-rem. Digital electronic dosimetry is now being used on site and results in a closer TLD/DRD correlation. Total whole body exposure by TLD includes conservative application of dose due to lost or damaged dosimetry and neutron exposure.

In accordance with Technical Specification 6.9.1.2.b, the reactor coolant activity limits of 100/E-bar and 1.0 microCurie per gram Dose Equivalent I-131 defined by Technical Specification 3.4.8, were not exceeded during 1992.

Should there be any questions regarding this information, please contact us.

Very truly yours,

T. F. Plunkett  
Vice President  
Turkey Point Nuclear
