FEB 02 1995

L-95-23
10 CFR 50.54(f)

U.S. Nuclear Regulatory Commission
Attn: Document Control Desk
Washington, D. C. 20555

Re: Turkey Point Unit 4
Docket No. 50-251
Safety-Related Motor-Operated Valve
Testing and Surveillance - Generic Letter 89-10

On June 28, 1989, the NRC issued Generic Letter (GL) 89-10, "Safety-Related Motor-Operated Valve Testing and Surveillance," recommending that licensees establish a program to provide for the testing, inspection, and maintenance of safety-related motor-operated valves (MOV's). Florida Power and Light Company's (FPL) plans with respect to the recommendations and scheduler requirements of the generic letter are documented in FPL letters L-89-467, dated December 28, 1989, L-90-233, dated June 28, 1990, and L-94-59, dated April 1, 1994.

FPL developed a comprehensive program for Turkey Point Units 3 and 4, for testing, inspection, and maintenance of safety-related MOV's to provide the necessary assurance that safety-related MOV's will function when subjected to the design-basis conditions during normal operation and abnormal events within the design basis of the plant.

Item m. of GL 89-10 requires licensees to notify the NRC in writing within 30 days of the completion of the actions described in the first paragraph of item i. of the generic letter. Pursuant to GL 89-10, Item m., this letter confirms FPL's completion of all design-basis reviews, analyses, verifications, tests, and inspections performed to comply with items a. through h. of the generic letter, for Turkey Point Unit 4.

Should there be any questions, please contact us.

Very truly yours,

T. F. Plunkett
Vice President
Turkey Point Plant
