Dear Mr. Newberry:

This responds to a request by your office for information on species protected by the Endangered Species Act that may occur in the vicinity of the Brunswick Nuclear Project in Southport, North Carolina, the Crystal River Plant, Crystal River, Florida, the St. Lucie Nuclear Plant, Hutchinson Island, Florida, and the Turkey Point Plant, Florida City, Florida. Enclosed are three species lists for the areas adjacent to the plant sites. Species that are highlighted in yellow are the species most likely to be affected by the operation of the plants.

The possible adverse impacts to the listed species under our jurisdiction from the operation of power plants are associated with the entrainment of individual animals in cooling water intakes and with the outflow of warmer-than-ambient temperature waters. The concern over warm water discharge is greatest for the Brunswick Plant near the Cape Fear River. Shortnose sturgeons may be thermally stressed in summer months and additional warming of the waters may be limiting usable habitats for this species.

Currently the National Marine Fisheries Service is consulting with the Nuclear Regulatory Commission (NRC) on the operation of the St. Lucie Power Plant. The NRC completed a biological assessment of the operation of the plant in November 1995 and provided a copy to our office in February 1996.

If you require additional threatened/endangered species information please call me at (813) 570-5312.

Sincerely,

Jeffrey Brown
